Kingsoft Presentation 2013

Kingsoft Presentation is one of the components of Kingsoft Office 2013, the latest version of the Kingsoft Office Suite. Kingsoft Office is supported by Windows XP, Vista, Windows 7, and Windows 8 operating systems. Kingsoft Presentation 2013 includes a larger amount of animation effects and is fully compatible with animations in Microsoft PowerPoint as well. Kingsoft Presentation has also made great improvements in supporting different types of multimedia. Now featuring integrated access to Microsoft Windows Media Player, Kingsoft Presentation 2013 allows users to play audio and video files directly on their slides. Furthermore, Kingsoft Presentation 2013 provides advanced functions to help users enhance their presentations in the most creative and vivid ways possible.

1 Basic Operations of Kingsoft Presentation

1.1 Introduction of Kingsoft Presentation

Kingsoft Presentation is a software program which is used to create presentations in the form of slides. These slides allow users to organize and present information of text, picture, audio, and even video files in a professional and presentable manner. Kingsoft Presentation 2013 not only inherits the advantages of the preceding versions, but also provides a new and improved interface style. This new interface brings additional features aimed at enhancing the user's experience. However, the classic interface style still remains for those who prefer it. Here we will introduce the functional interface, the main functions, and the basic operations of Kingsoft Presentation.

1.1.1 The Functional Interface of Kingsoft Presentation

By opening Kingsoft Presentation, the functional interface will appear as below:

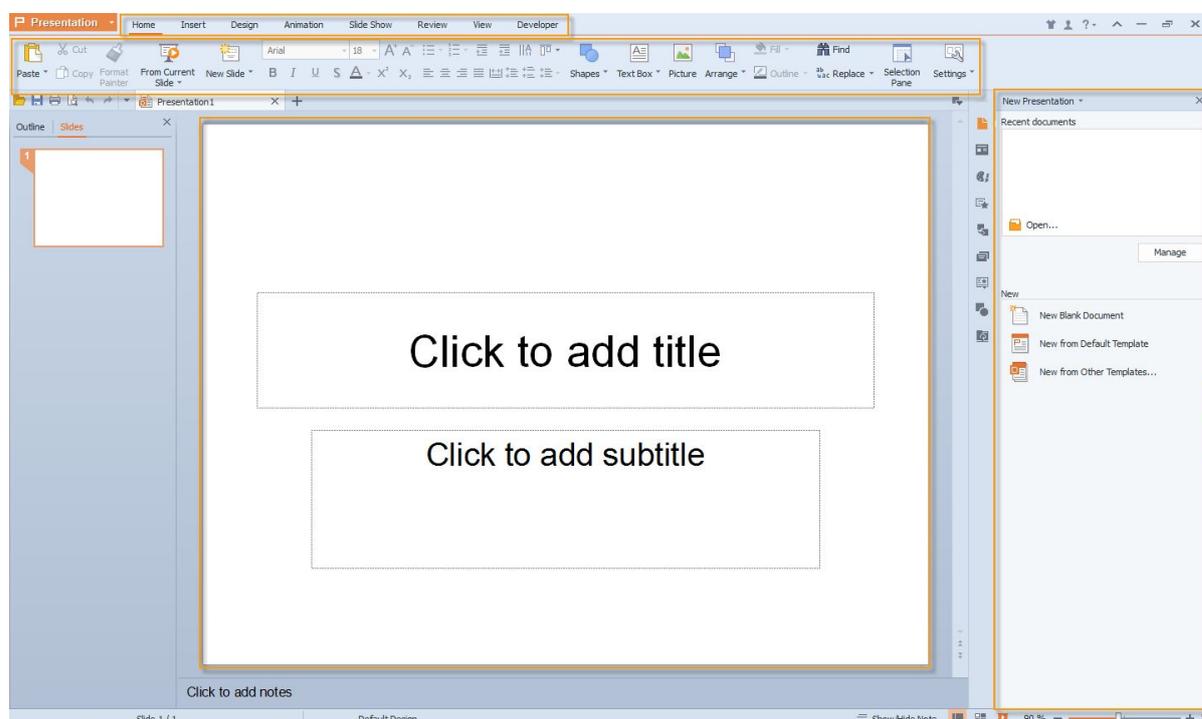

Figure 1.1-1 Kingsoft Presentation Main Interface

The window contains the **Application** menu, tabs, ribbon, root directory, slide editing area and task window.

- The ribbon displays the different functions of each tab respectively.
- The root directory previews the thumbnails of each slide in a presentation.
- The slide editing area displays the slide that is currently being modified.
- The quick access toolbar provides quick access to open, save, print, print preview, undo, and redo functions.
- Multi-tabbed document windows allows users to edit multiple presentations in a single program window.
- The task window on the right side contains 9 kinds of task windows, including **New Presentation**, **Slide Layout**, **Slide Design-Color Schemes**, **Slide Design-Animation Schemes**, **Slide Transition**, **Slide Design-Design Templates**, **Custom Animation**, **AutoShapes**, and **Backup Management**.

Tips: On the top right corner of the window, there are three icons:

- Click **Switch UI** , you can switch the interface of Kingsoft Presentation.
- Click **Feedback** , you can contact us by e-mail.
- Click **Help** , you can check for online help of Presentation, learn about the latest activities of Kingsoft, check for version details and updates, activate or remove activation of Presentation 2013.

Figure 1.1-2 Kingsoft Presentation help menu

1.1.2 The Application Menu

The Application menu  **Presentation** is at the top left corner of the Kingsoft Presentation main interface. The functions offered by the Application menu includes **New**, **Open**, **Save**, **Save As**, **File Package**, **Print**, **Print Preview**, **Export to PDF**, **Send E-mail**, **Encrypt**, **Properties**, **Switch UI**, and so on. Here we will briefly introduce some of the functions in the Application menu.

1.1.2.1 Export to PDF

PDF is a popular file format in network file sharing and exchange. In order to meet the users' needs to save a presentation in PDF format, Kingsoft Office 2013 offers a built-in PDF converter to convert a Kingsoft

Presentation file into a PDF file. Steps to export to PDF are as follows:

- (1) Open the **Application** menu , choose **Save as**, and select **Export to PDF** in the drop-down list. The **Export Adobe PDF File** dialogue box will appear.
- (2) Click **Browse** to choose the destination for the PDF you want to export.
- (3) Choose the range of slides to export. You can choose to export all of the slides or a specific range of slides.
- (4) Click **OK** to begin converting your document to a PDF file.

Tip: This function can only be used in Windows XP operating system and other versions above.

1.1.2.2 File Package

Zippping a PPT file can make the presentation file smaller and easy to share. This is useful when the presentation contains media stuff like video and audio. Follow these steps to save presentation files as compressed zip file directly.

- (1) Open the presentation file you'd like to compress in Kingsoft Presentation 2013.
- (2) Go to  > **File Package** > **Package into Compressed File**.
 - **Package into Folder:** Copy the presentation file and related media items, such as video, audio, etc. into the specified folder, in order to play this file on another computer.
 - **Package into Compressed File:** Copy the presentation file and related media items, such as video, audio, etc. into the specified Zip folder, in order to play this file on another computer.
- (3) In the pop-up dialog, enter a file name and choose a location for the presentation zip. Then press OK.
- (4) The zipping process is completed. Click the Open the compressed file button in the following dialog to see the result.

1.1.2.3 Send E-mail

In Kingsoft Presentation, a presentation can be directly sent as an E-mail attachment. Follow the steps below:

- (1) Open the **Application** menu  and select **Send E-Mail**. If you haven't saved the presentation yet, the **Save As** dialogue box will pop up to remind you to save the presentation. Enter the file name and click **Save**.
- (2) In the **To** and **Subject** text boxes, type in the E-mail address of the recipient and the subject of your

E-mail.

- (3) Click **Send** to complete the operation.

1.1.2.4 Document Encryption

If you need to protect the presentation with a password, you can encrypt your document by the following steps:

- (1) Open the **Application** menu  , choose **File Information**, and select **Encryption** in the drop-down list. The **Options** dialogue box will pop up.
- (2) Open the **Security** tab in the **Options** dialogue box.
- (3) Type the password in the **Document password** text box.
- (4) Re-type the password in to the **Reenter password** text box to ensure the correct password is used.
- (5) Click **OK** to complete encrypting the document.

1.1.2.5 Properties

You can view the information related to the presentation by the following steps:

- (1) Open the **Application** menu  , choose **File Information**, and select **Properties** in the drop-down list.
- (2) In the **Property** dialogue box, open the **General** tab. See below:

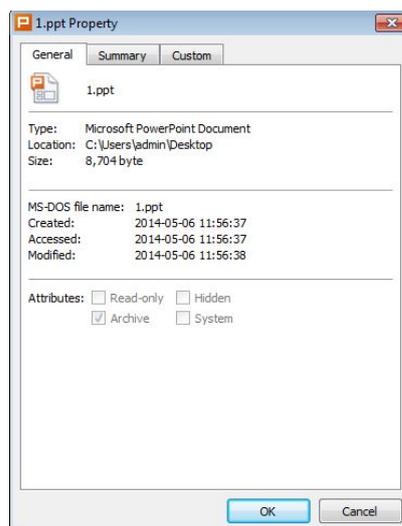

Figure 1.1-3 The General tab

- (3) To summarize the properties of the presentation, click the **Summary** tab. See below:

Figure 1.1-4 The Summary tab

(4) The **Custom** tab allows you to add more information and to further alter the properties of your presentation.

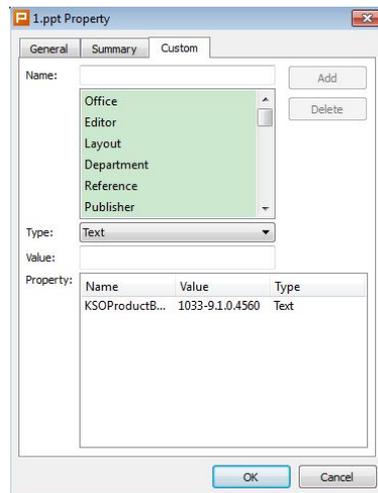

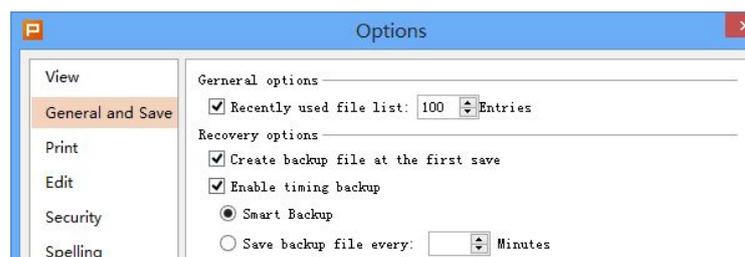

Figure 1.1-5 The Custom tab

1.1.2.6 Backup Management

By choosing the Backup Management option in the Application Menu, the Backup Management task window will open at the right side of the screen. Click the Backup Management icon again to open the drop-down list, and then you can choose the options listed there.

To change auto recovery intervals, go to the Application menu **Presentation** and click **Options**. In the **Options** dialog box, choose **General and Save** tab on the left and change the recovery settings on the right. See below:

1.1.3 Tabs

Kingsoft Presentation 2013 provides 14 tabs, which includes 8 main tabs and 6 contextual tabs. The main tabs are **Home**, **Insert**, **Design**, **Animation**, **Slide Show**, **Review**, **View**, and **Developer** (available only in Kingsoft Office Professional). The contextual tabs are **Table tools**, **Drawing tools**, **Picture Tools**, **WordArt**, **Print Preview** and **Slide Master**. In Kingsoft Presentation, the contextual tabs are only active after inserting a corresponding object.

1.2 Kingsoft Presentation Features

To best use Kingsoft Presentation, you should obtain a better understanding of its feature and special functions, which will benefit you with a better user experience as well as a more professional presentation.

1.2.1 Table Style

Kingsoft Presentation provides numerous table styles for different types of presentations. Not only could the table styles be customized, their fonts, borders, backgrounds, colors, and other aspects could be altered as well. With all of these options, Kingsoft Presentation has made it convenient for the user to create the slides they truly want. See below:

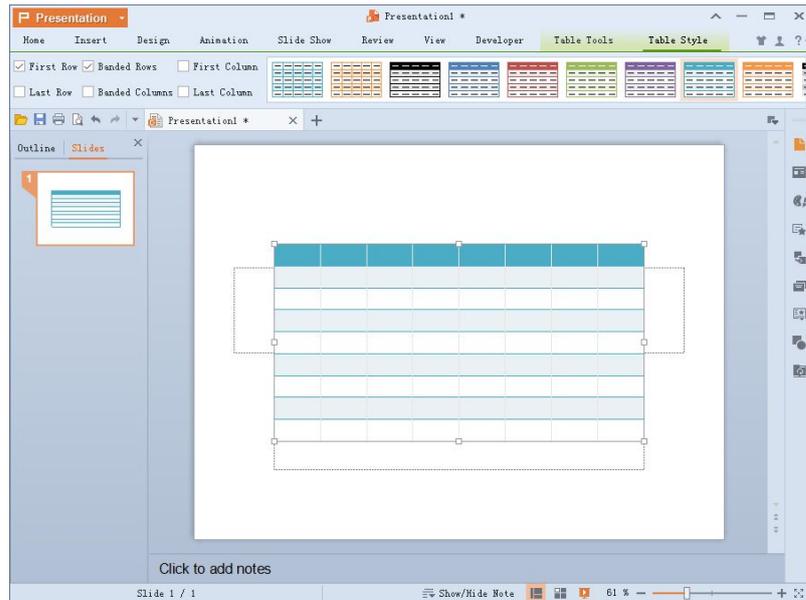

Figure 1.1-6 Table style

1.2.2 Animation Sound Effect

Sound effect in the custom animation tab in Kingsoft Presentation allows users to insert sounds such as applause, hammering, explosions, and other custom sound effects to slides.

1.2.3 Highlighter

In Kingsoft Presentation, you can outline and punctuate text directly on the slide while it is being presented by the Highlighter tool. It plays an important role in helping the speaker present his or her information more clearly. The Highlighter tool can be found in the lower left corner of the screen while a slide is being presented. See below:

Figure 1.1-7 The Highlighter menu and its position

1.2.4 Double-screen Function

The double-screen function allows the user to take advantage of the computer systems which support multiple monitors. An operation interface exclusive to the speaker is provided during his or her presentation, while the audience is only able to view the slide being presented. This function is most effective when using a system with two or more connected monitors. The double-screen function includes two modes:

- **Clone mode:** Synchronizes the display to the speaker and to the audience.
- **Extended mode:** Keeps the speaker's interface separate from what is being displayed to the audience. In this case, the audience can only view the slide being presented at the time.

2 Home Tab

2.1 Slide

When first creating a presentation, a blank presentation is usually used. A slide layout should then be selected. You can then begin to enter basic contents into the slides. By the **New Slide** icon in the **Home** tab you can customize these slides.

2.1.1 Create a Presentation

You can choose the colors, style and other properties of a blank presentation, which allows more room for the creativity and imagination of the user.

There are three ways to create a blank presentation:

- Open the **Application** menu  Presentation, select the **New** option and choose **New Blank Presentation** in the drop-down list.
- Click the **New** icon  in the **Quick Access** toolbar.
- Right click the blank space in the document tab and choose **New Blank Presentation** in the context menu, or just click the plus button .

2.1.1.1 Use the Ready-made Styles to Create a Presentation

The ready-made presentation slide styles can be used to create a presentation. These styles preset the fonts and background colors and therefore can greatly save your time when creating a presentation. These ready-made slide styles can also be customized to the user's liking.

2.1.1.2 Use the Templates to Create a Presentation

Kingsoft Presentation 2013 provides various templates for you to create all types of presentations. To apply templates, follow the steps below:

- (1) Open the **Application** menu  Presentation and choose the **New** option. Click **New from Other Templates** and the **Templates** dialogue box will open.
- (2) Open the template tab that you prefer and select a template from the templates list. You can then preview the corresponding template in the **Preview** window as shown below:

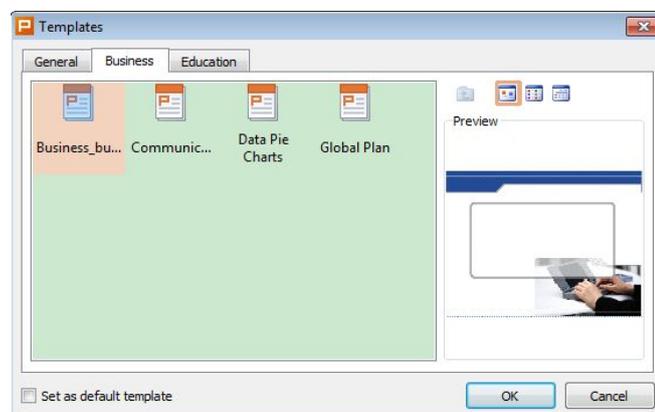

Figure 2.1-1 The Templates dialogue box

(3) Click **OK** to complete the operation.

2.1.2 New Slide

There are two ways to insert a new slide into a presentation.

- Click the **New Slide** icon  in the **Home** tab.
- Right click the blank space in the slide thumbnails pane on the left and select **New Slide** in the context menu.

2.1.3 Duplicate

You can create a duplicate slide of the selected slide. The steps are as follows:

- (1) Select the slide you want to duplicate.
- (2) Click the **New Slide** icon in the **Home** tab and select the **Duplicate** option in the drop-down list to create a duplicate slide.

2.1.4 Slide Layout

The slide layout defines the alignment of the content on your slides. A layout contains placeholders that can hold text and other content as well. Applying slide layouts is a convenient way to get different arrangements on your slides.

2.1.4.1 Apply Slide Layout

When creating a presentation, it is important to choose an appropriate layout in order to make the slides more attractive.

The steps to apply a slide layout are shown as follows:

- (1) When you first open Kingsoft Presentation, it will automatically create a blank presentation and apply the **Title Slide** to the first slide, as shown in the following picture:

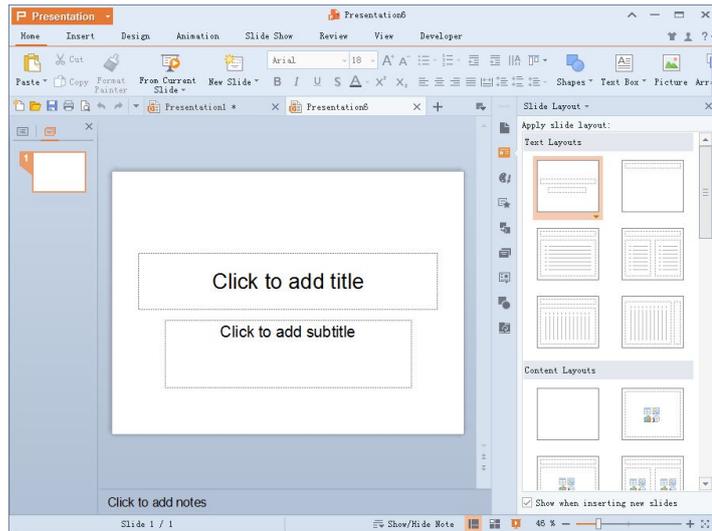

Figure 2.1-2 The Title Slide

(2) In this example, enter the text “Travel E-commerce System” in the title placeholder (the dotted rectangular box), and “GIS” in the subtitle placeholder. See below:

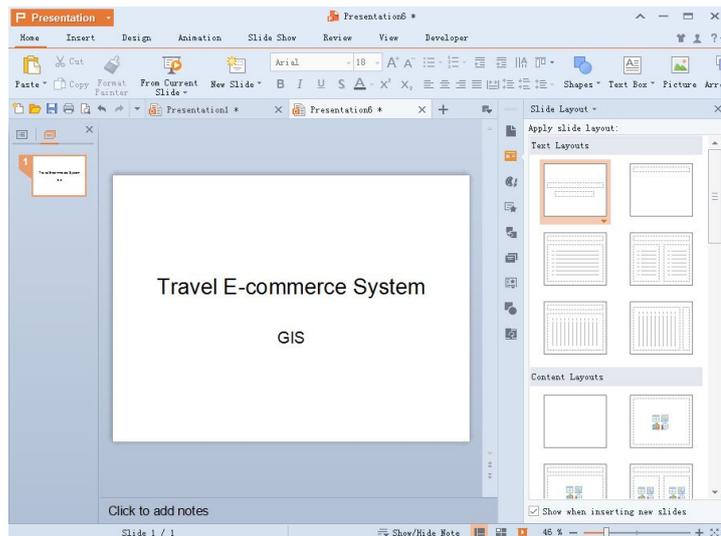

Figure 2.1-3 Enter the title and subtitle

2.1.4.2 Types of Slide Layouts

Kingsoft Presentation contains four different categories of slide layouts, which provide a total of 30 automatic slide layouts for the user to choose from.

● Text Layouts

There are 6 types of text layouts which define the arrangement of the text.

- The **Title Slide** and **Title Only** layouts are mostly used in introductory slides.
- The **Title and Text**, **Title and Vertical Text** and **Vertical Title Text** layouts are the most

commonly used ones.

- The **Title and 2-Column Text** layout is used to create a column effect.

A preview of the different text layouts is displayed below:

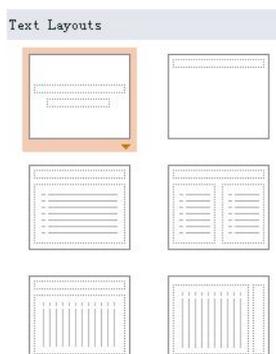

Figure 2.1-4 Text Layouts

● Content Layouts

Kingsoft Presentation provides seven different content layouts which determine the layout of pictures, tables, titles, graphs and other objects in slides. You can use the **Blank** layout which contains no placeholders for a more versatile design process. The **Content and Title** and **Content** layouts only determine the layout of single object while the others arrange multiple objects. These layouts are shown below:

Figure 2.1-5 Content Layouts

● Text and Content Layouts

There are 7 kinds of text and content layouts. You can use them to define the layout of a combination of text and objects. See below:

Figure 2.1-6 Text and Content Layouts

● Other Layouts

There are 11 types of other layouts that are not included in the three categories mentioned above. These layouts can be used to arrange animations, sounds, charts, tables, art clips and other types of content.

These layouts are displayed in the following figure:

Figure 2.1-7 Other Layouts

2.2 Text

Kingsoft Presentation provides four types of text for users to add into a slide: text in placeholder, text in text box, text in shapes and WordArt. The following picture shows the four types:

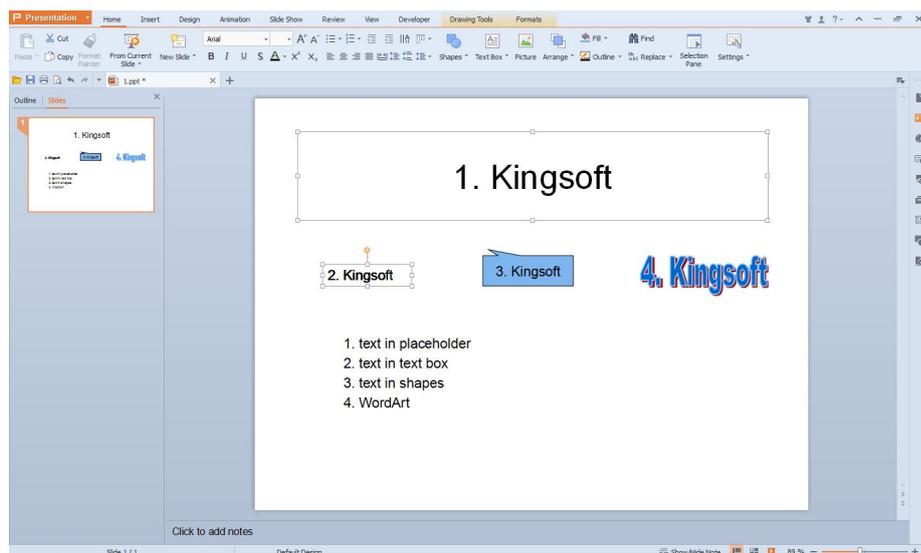

Figure 2.2-1 Text in presentation

2.2.1 Add Text to Slides

2.2.1.1 Add Title or Main Text

You can add title or main text to the placeholder. Click the placeholder and input the text you prefer.

2.2.1.2 Add Text to Text Box

To add text to text box, you should insert a text box first. Follow the steps below:

- (1) Click the **Text Box** icon in the **Home** tab or the **Insert** tab.
- (2) Select **Horizontal** or **Vertical** style in the drop-down list as you like. See below:

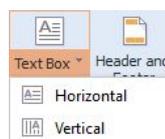

Figure 2.2-2 Text Box

- (3) Click on the slide where you want to add the text box and type the words into the text box.

2.2.1.3 Add Text to Shapes

To add text to shapes, you should insert a shape first. Follow the steps below:

- (1) Click the **Shapes** icon  in the **Home** tab or the **Insert** tab and select a shape you like.
- (2) Place it on the right spot and type the words in it.

2.3 Clipboard Functions

After selecting the text or an object, you can execute different operations, such as move, copy, delete, etc. You can accomplish these commands by command, shortcut keys, and the mouse.

2.3.1 The Paste Function of the Clipboard

To paste a selection of text or object, follow the steps below:

(1) Open the the **Home** tab and the **Clipboard** functions are at the top left corner.

Figure 2.3-1 The clipboard icons

(2) Click **Paste** and it will show as follows:

Figure 2.3-2 The Paste drop-down list

(3) As you can see in the figure above, Kingoft Presentation offers three paste options:

- **Formatted Text (K):** paste by the “source text format”.
- **Unformatted Text:** paste by the “plain text format”.
- **Paste Special:** you can select the paste format offered by this option according to your requirements, such as the HTML format, unformatted text, etc.

Another two ways to apply the paste function are as follows:

- (1) Select the text or object you want to paste, press **<Ctrl+C>**, and then press **<Ctrl+V>**.
- (2) Right-click and select **Paste** in the context menu.

2.3.2 The Cut Function of the Clipboard

To cut text or an object, simply follow the three ways shown below:

- Click the **Cut** icon in the **Home** tab.
- Press **<Ctrl+X>**.
- Right-click and select **Cut** in the context menu.

2.3.3 The Copy Function of the Clipboard

To apply the copy function, simply follow the three ways shown below:

- Click the **Copy** icon in the **Home** tab.
- Press <Ctrl+C>.
- Right-click and select **Copy** in the context menu.

2.3.4 Format Painter of the Clipboard

In order to use format paint simply do as follows:

(1) Place the cursor on the text or object whose format you want to copy.

(2) Click the **Format Painter** icon  in the **Home** tab.

(3) The cursor will then change into the format painter shape .

(4) Move the cursor to the text or object whose format you want to change and select it.

Tips: If you need to use the format painter continuously, you can double click the **Format Painter** icon

2.4 Font Format

Kingsoft Presentation offers a number of fonts, font size, and different formats for characters. When you need to change the appearance of certain words, first select these words, and then set the font which you prefer. The **Font** functions icons are shown as below:

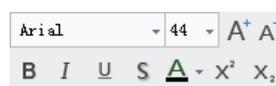

Figure 2.4-1 Font format

2.4.1 Set the Font

Follow these steps to set the font:

(1) Select the words whose font you want to change.

(2) Open the **Home** tab, click the **Font** icon , and then choose the appropriate font from the

drop-down list. See below:

Figure 2.4-2 The Font drop-down list

2.4.2 Set the Font Size

To alter the font size, follow the steps below:

(1) Select the words whose font size you want to change.

(2) Open the **Home** tab, click the **Font Size** icon , and choose the appropriate font size from the drop-down list.

Tips: You can click **A⁺** and **A⁻** icons in the **Home** tab to increase and decrease the font size.

2.4.3 Set the Font Style

The **B** button can make the selected text bold.

The **I** button can italicize the selected text.

The **X²** button can transfer the selected text into small letters above the text baseline.

The **X₂** button can transfer the selected text into small letters below the text baseline.

The **U** button can underline the selected text. Click the arrow to select different underline styles and colors.

The **S** button can set shadow effect for the selected text.

The **A** button can change the color of the selected text. Click the arrow to select different available colors.

2.5 Paragraph Functions

Kingsoft Presentation offers a number of paragraph functions. The corresponding icons are shown below:

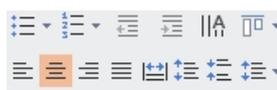

Figure 2.5-1 The paragraph functions

Among them, the **Bullets** and **Numbering** options can be used to organize and present information orderly and clearly.

2.5.1 Bullets and Numbering for Paragraphs

2.5.1.1 Inserting Bullet Points and Numbers for Paragraph

The steps to adding bullets and numbering to a document are as follows:

(1) Open the **Home** tab and click the drop-down arrow of the **Bullets** icon . The bullets options menu will open and show as below:

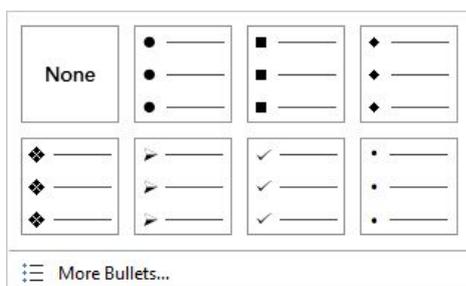

Figure 2.5-2 Bullets options

(2) You can choose one of the bullet point varieties from the list. Alternatively you can open the **Numbering** menu by clicking the drop down arrow of the **Numbering** icon  and choose any of the numbering form you prefer:

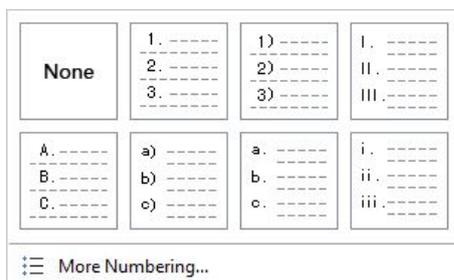

Figure 2.5-3 Numbering Options

(3) Insert the bullets or numbers.

(4) Press **Enter** and Kingsoft Presentation will automatically insert the next bullet point or number.

(5) Click either **More Bullets** or **More Numbering** in figure 2.5-2 and figure 2.5-3 will open the **Bullets and Numbering** dialogue box as below:

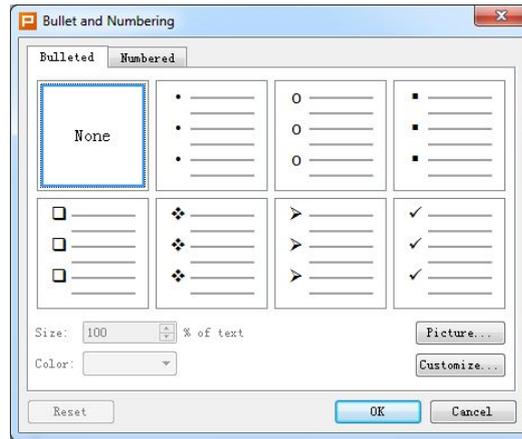

Figure 2.5-4 Custom bullets and numbering

You can customize the bullets and numbering here by clicking **Customize** and choosing the bullets and numbers you prefer from a large amount of varieties.

2.5.1.2 Adding Bullet Points to Existing Text

To add bullet points to existing text, follow the steps below:

- (1) Select the text.
- (2) Click the the drop-down arrow of the **bullets** icon in the **Home** tab and choose the bullet point that you like. If there is no suitable bullet variety, you can open the **Bullets and Numbering** dialogue box by clicking **More Bullets** option at the bottom.

2.5.1.3 Auto Numbering

If you want to add numbers to existing text, follow the steps below:

- (1) Select the text.
- (2) Open the **Home** tab and click the drop-down arrow of the **Numbering** icon. You can choose preferred numbering variety. If there is no suitable variety, you can open the **Bullets and Numbering** dialogue box by clicking **More Numbering** option at the bottom.

2.5.2 Indent

In Kingsoft Presentation, you can set indent for paragraphs. Select the paragraph for which you want to set indent and click the **Decrease Indent** icon  or the **Increase Indent** icon  in the **Home** tab.

2.5.3 Alignment

Kingsoft Presentation offers five different alignment alternatives: **Align Text Left** , **Center** , **Align Text Right** , **Justify** , and **Distributed** . To apply these options, follow the steps below:

- (1) Select the text you want to align.
- (2) Click one of the icons mentioned above as you like.

You can also click the **Alignment** icon in the **Home** tab to choose a type of alignment for the text or the font. See below:

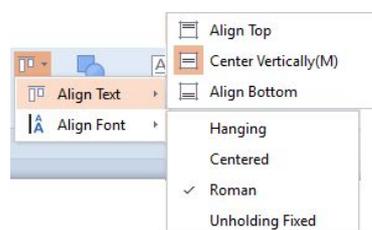

Figure 2.2-5 The Alignment menu

As shown above, you can choose **Align Top**, **Center Vertically**, and **Align Bottom** in the **Align Text** menu. You can choose **Hanging**, **Centered**, **Roman**, and **Unholding Fixed** in the **Align Font** menu.

2.5.4 Line Spacing

In order to set line spacing for paragraphs, follow the steps below:

- (1) Put the cursor in the paragraph which you want to set spacing for.
- (2) Click the **Increase Spacing**  and **Decrease Spacing**  icon in the **Home** tab to increase or decrease spacing for the selected paragraph.
- (3) Click the **Line Spacing** icon  in the **Home** tab and select the value which you like in the drop-down list to set the line spacing.
- (4) Select **More** and the **Line Spacing** dialogue box will open and show as below:

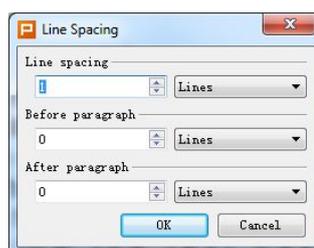

Figure 2.5-6 Line Spacing

(5) Then you can select the exact distance between the lines in the paragraph, before paragraph, and after paragraph as you like.

(6) Click **OK** to complete the operation.

2.5.5 Text Direction

To change text direction in Kingsoft Presentation, follow the steps below:

(1) Put the cursor into the text or select the text whose direction you want to change.

(2) Click the **Text Direction** icon  in the **Home** tab to change text into vertical or horizontal direction.

2.6 Fill

Kingsoft Presentation offers a function of filling the certain area in the slide with different effects. You can click the drop-down arrow of the **Fill** icon and select an automatic color from the list. You can also click **More Fill Colors** to get more varieties.

Figure 2.6-1 The Fill drop-down list

You can also select **Gradient, Texture, Pattern, and Picture**. The **Fill Effects** dialogue box will open where you can select more background effects. See below:

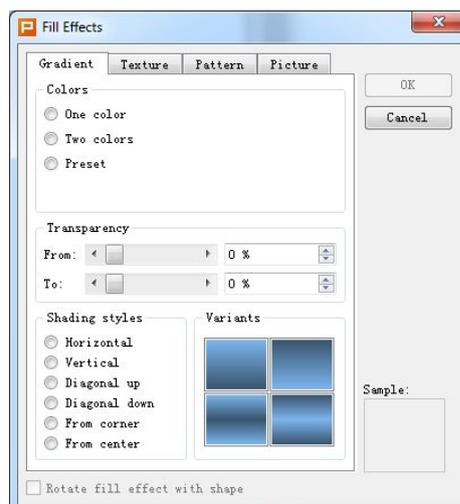

Figure 2.6-2 The Fill Effects dialogue box

2.7 Outline

You can set the color and the style of the outline in Kingsoft Presentation by the steps below:

- (1) Select the text box.
- (2) Click the drop-down arrow of the **Outline** icon in the **Home** tab. See below:

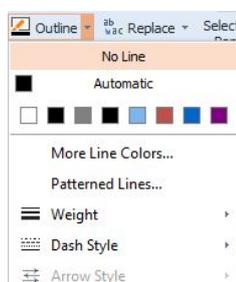

Figure 2.7-1 The Outline drop-down list

- (3) Select an automatic color. Or you can select **More Line Colors** to open the **Colors** dialogue box. See below:

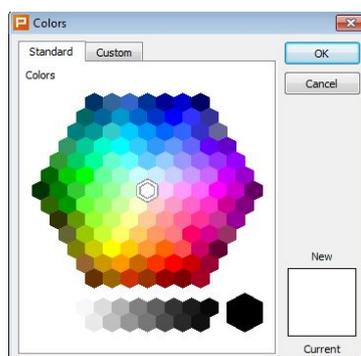

Figure 2.7-2 The Colors dialogue box

- (4) Choose one of the automatic colors you prefer in the **Standard** tab or set your own color in the **Custom** tab.
- (5) You can also set the pattern of the outline by selecting **Patterned Lines** in the **Outline** drop-down list. The **Patterned Lines** dialogue box will open and show as below. Select the preferred pattern and click **OK**.

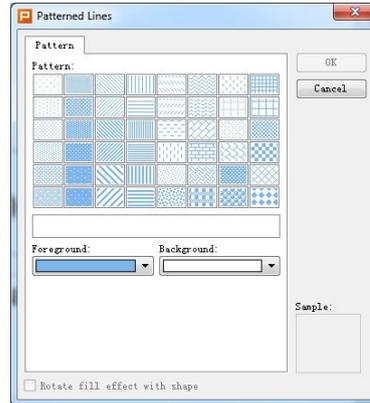

Figure 2.7-3 The Patterned Lines dialogue box

- (6) Select **Weight** and **Dash Style** in the **Outline** drop-down list and select the styles you prefer offered in the corresponding drop-down list.

2.8 Draw

Kingsoft Presentation includes many types of tools that are capable of drawing linear objects such as lines, rectangles, circles, arrows, and so on. You can also adjust the arrangement and effects associated with these objects.

2.8.1 Draw Lines and Connectors

Follow the steps below to draw lines and connectors:

In the **Home** tab, click the **Shapes** icon  and select the style of **Lines** or **Connectors** you desire. The styles are displayed in the following figure.

Figure 2.8-1 Lines and Connectors

- (1) Click the area where you want to draw the shape, drag to draw the shape, and click wherever you

want the line or connector to end.

2.8.2 Draw Comment Bubbles

Comment bubbles are often used to mark or label the content, which can make your presentation more vivid and understandable. Steps to create a comment bubble on your slide are as follows:

(1) In the **Home** tab, click the **Shapes** icon  and select the style of **Comment** bubble you want. The styles are displayed in the following figure:

Figure 2.8-2 Comment

(2) Click the area you want the comment bubble to appear. A blinking cursor indicates that text can be placed in the bubble and the shape of the bubble can also be adjusted. See below:

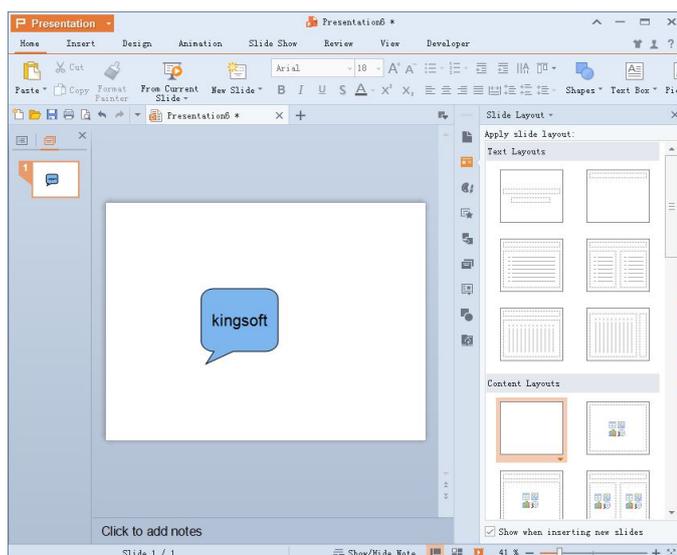

Figure 2.8-3 Draw a comment

2.8.3 Insert Action Buttons

To insert action buttons in presentation, follow the steps below:

(1) In the **Home** tab, click the **Shapes** icon  and select the style of **Action Buttons** you want. The styles are displayed in the following figure.

Figure 2.8-4 Action buttons

(2) Click the slide to create an action button and the **Action Settings** dialogue box will open and show as below:

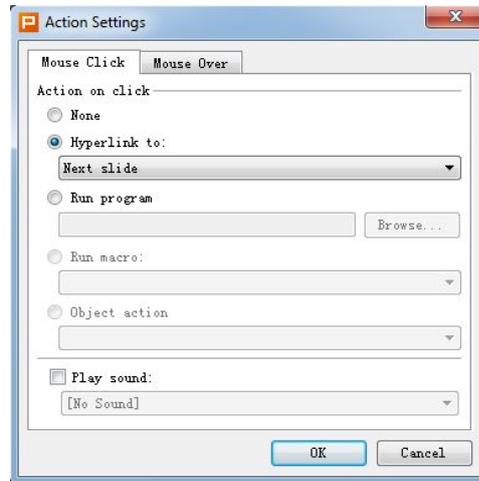

Figure 2.8-5 The Action Settings dialogue box

- (3) Select the **Mouse Click** or **Mouse Over** tab to determine the function of the action button.
- (4) In the **Action on click** section, select **None** if you do not want to perform any action.
- (5) To insert a hyperlink, click the drop-down arrow of **Hyperlink to** for different options.
- (6) To run a program upon a mouse click or mouse over, select **Run program** and click **Browse** to choose the desired program.
- (7) To play sound, select **Play sound** and choose a sound from the drop-down list provided.
- (8) Click **OK** to complete the operation.

2.9 Show and Hide Gridlines

The gridline is used as a reference to guide the position of contents on a slide. To show the gridlines, open the **Home** tab, click the **Arrange** icon, select **Align** in the drop-down list, and click **Gridlines**. See below:

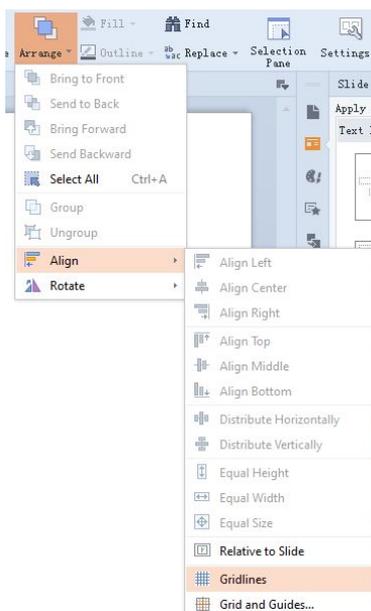

Figure 2.9-1 Show /Hide gridlines

Click **Gridlines** again to hide the gridlines.

Tips: Gridlines make it convenient to measure and arrange objects accurately. Keep in mind that the gridlines won't be printed when printing your slides.

2.9.1 Grid and Guides

The grid and guidelines working together allows the user to align slide content more quickly and more accurately.

To apply this function, follow the steps below:

(1) In the **Home** tab, click the **Arrange** icon, select **Align**, and choose **Grid and Guides** in the drop-down list. The **Grid and Guides** dialogue box will open and show as below:

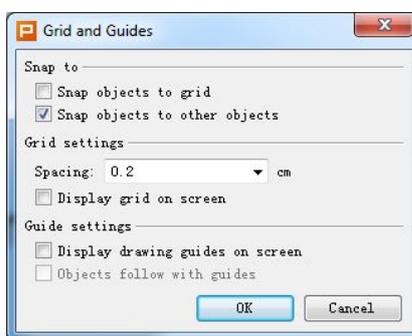

Figure 2.9-2 The Grid and Guides dialogue box

(2) Select **Display grid on screen** and **Display drawing guides on screen** and you will see the grid and guidelines on screen.

- (3) Move the guidelines by clicking and dragging them. The distance of the guidelines from the center of the slide will be displayed when dragging them.
- (4) To add guidelines, press <Ctrl>, click and drag the guideline to a new location. Repeat this process to add more guidelines.
- (5) To delete guidelines, click and drag them out of the slide.
- (6) Select the **Objects follow with guides** check box in the **Guide settings** section and any objects that are placed near the guidelines will automatically attach to them. Changing the position of the guidelines will change the position of the attached objects. This is displayed in the following figure:

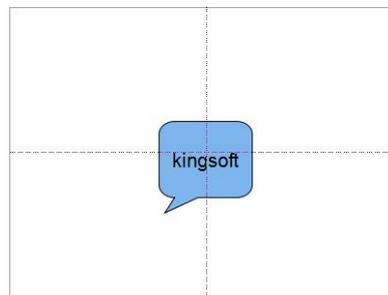

Figure 2.9-3 Objects follow with guides

2.10 Mark Up

The speaker can mark the key points while presenting their slides to the audience. See below:

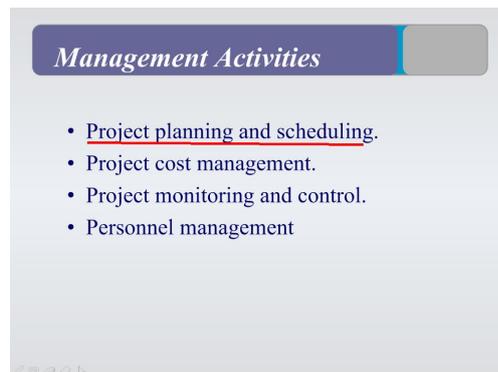

Figure 2.10-1 Mark the slide

Marks that are used and saved while the slides are being presented cannot be deleted until the presentation is over and the speaker edits his or her slides again. Marks that are saved in the category of special shape objects can be moved, copied, deleted, etc.

To remove the marks on slides, take the following steps:

- (1) Select the slides which you want to remove marks from.

(2) Click the arrow on the **Application** menu icon, select **Edit**, move to **Markup**, and select **Erase Markups on Slide**. See below:

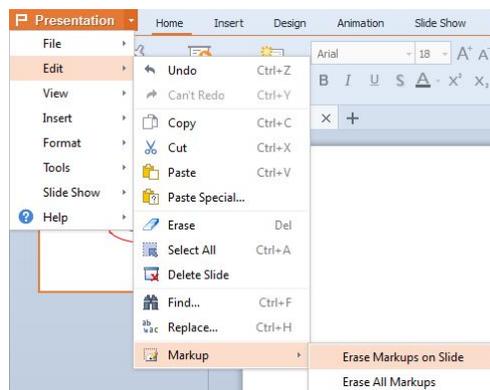

Figure 2.10-2 Erase Markups on Slide

To remove all of the markups from each slide of the presentation, do the following:

Click the arrow on the **Application** menu icon, select **Edit**, move to **Markup**, and select **Erase All Markups**.

2.11 Find and Replace

Kingsoft Presentation provides the function of finding and replacing content in presentation.

2.11.1 Find

To find some certain content in the presentation, follow the steps below:

(1) Click the **Find** icon  in the **Home** tab and the **Find** dialogue box will open and show as below:

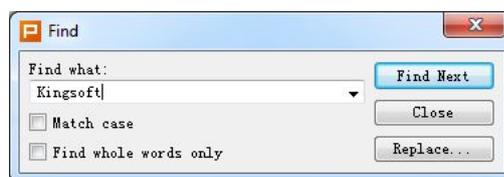

Figure 2.11-1 The Find dialogue box

(2) Enter the content that you want to find in the **Find what** enter box, then click **Find Next** to find the content.

(3) Select **Match case** and **Find whole words only** check boxes according to your needs.

(4) Click **Close** to exit.

2.11.2 Replace

To replace certain content in the presentation, follow the steps below:

- (1) Click the **Replace** icon  in the **Home** tab and the **Replace** dialogue box will open and show as below:

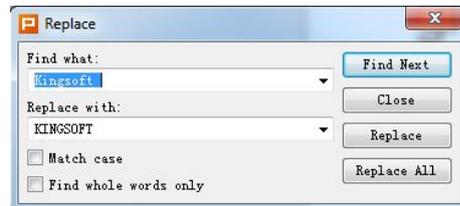

Figure 2.11-2 The Replace dialogue box

- (2) Enter the content that you want to replace in the **Find what** enter box.
- (3) Enter the content you want to replace with in the **Replace with** enter box.
- (4) Click **Find Next** to find the content.
- (5) Click **Replace** to replace the currently found content.
- (6) Click **Replace All** to replace all the content found in the presentation.
- (7) Click **Close** to exit.

2.11.3 Replace Font

You can also replace the font of the selected content by the following steps:

- (1) Click the drop-down arrow on the Replace icon and select Replace Font. See below:

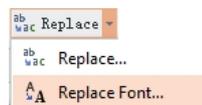

Figure 2.11-3 The Replace drop-down list

- (2) The **Replace Font** dialogue box will open and show as below:

Figure 2.11-4 The Replace Font dialogue box

- (3) Select the font you would like to replace in the **Replace** drop-down list.
- (4) Select the font you would like to replace with in the **Replace With(w)** drop-down list.
- (5) Click **Replace** to complete the process.
- (6) Click **Close** to exit.

2.12 Selection Pane

The selection pane allows you to check what is on your slide and makes it easier for you to change the orders and the names of the shapes on the slide. To use this function, follow the steps below:

- (1) Click the **Selection Pane** icon in the **Home** tab and the **Selection Pane** task window will open on the right. See below:

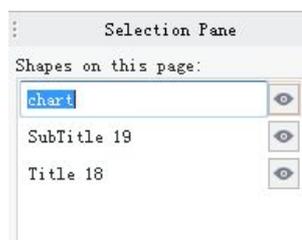

Figure 2.12-1 Selection Pane

- (2) The shapes contained in the current presentation are listed in the window task. You can double click the shapes to change their names or click the eye symbol on the right to hide the shape.

2.13 Slide Show

Kingsoft presentation provides two options for slide show. To show slides, follow the steps below:

- (1) Click the **Slide Show** icon in the **Home** tab.
- (2) Choose **From Beginning** or **From Current Slide** in the drop-down list. See below:

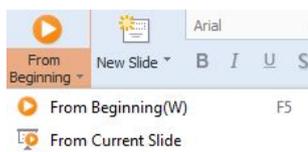

Figure 2.13-1 Slide Show drop-down list

3 Insert Tab

3.1 Tables

Tables in Kingsoft Presentation are made up of multiple rows and columns, in which you can insert items such as text, numbers, and graphics in order to help you carry out analysis more quickly and present information more conveniently.

3.1.1 Insert Table by the Toolbar

To insert a table by the toolbar, follow the steps below:

- (1) Select the slide where you want to insert the table.
- (2) Click the **Table** icon  in the **Insert** tab. The **Insert Table** drop-down list will appear.
- (3) Move the cursor to draw a table to whatever dimensions you like. Kingsoft Presentation will automatically adjust the number of rows and columns according to the position of the cursor as the width and the length of the table increases or decreases. See below:

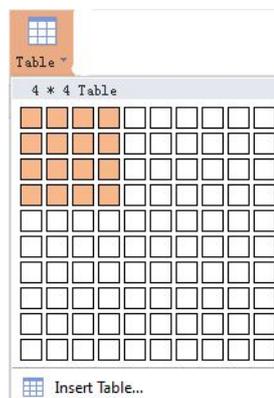

Figure 3.1-1 Insert a table

- (4) Release the mouse when you are satisfied with the dimensions of the table. The table will be inserted into the slide.

3.1.2 Insert Table by the Dialogue Box

To insert a table by the dialogue box:

- (1) Put the insertion point where you want to insert the table.
- (2) Select the **Insert Table** option at the bottom of the **Insert Table** drop-down list to open the dialogue

box as follows:

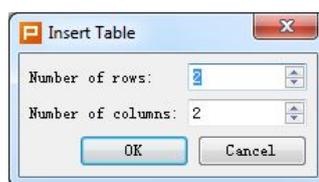

Figure 3.1-2 The Insert Table dialogue box

- (3) Enter the number of rows and columns you want.
- (4) Click the **OK** button to complete the operation.

3.2 Table Tools

After inserting a table, you can find the **Table Tools** tab and **Table Style** tab presented in line with the **Home** tab. You can use the **Table Tools** tab to insert, adjust, or modify the inserted table.

3.2.1 Insert Content into Table

To insert text in the table, move the insertion point into the cell where you want to insert text. If the text you entered exceeds the cell width, it will automatically wrap to the next line and increase the row height. If you want the cell to start a new paragraph, press **<Enter>** and the row height will increase accordingly. If you want to move to the next cell to insert text, you can click the cell or press the **<Tab>** key to move the insertion point, and then enter the appropriate text.

3.2.2 Insert and Delete Rows and Columns of the Table

To insert rows and columns in the existing table, use the corresponding icons in the **Table Tools** tab. See below:

Figure 3.2-1 Insert icons

The functions of this icons are as follows:

- **Insert Above:** Add a new row directly above the selected row.
- **Insert Below:** Add a new row directly under the selected row.
- **Insert Left:** Add a column to the left of the selected column.
- **Insert Right:** Add a column to the right of the selected column.

To delete rows and columns in the table, click the **Delete** icon in the **Table Tools** tab and choose the corresponding option in the drop-down list. See below:

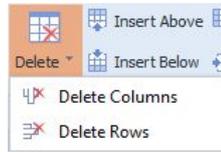

Figure 3.2-2 The Delete drop-down list

3.2.3 Format Contents in the Table

You can set the font, font style, font size, color, alignment, etc. of the text in the cell.

3.2.3.1 Set Font Format for the Text in Table Cells

The steps are as follows:

- (1) Select the cell in which you want to set the font of the text.
- (2) Set the font, font style, font size, color, spacing etc. by the corresponding icons in the **Table Tools** tab.

See below:

Figure 3.2-3 Corresponding icons

3.2.3.2 Set the Align Style in the Table

To set the align style in the table, the steps are as follows:

- (1) Select the cells for which you want to set the align style.
- (2) Click the arrow on the **Align** icon  in the **Table Tools** tab and select the align style you prefer in the drop-down list.
- (3) You can also use the align icons in the **Table Tools** tab to set the align style. See below:

Figure 3.2-4 Align icons

3.2.3.3 Text Direction and Margin in Table

Click the **Text Direction** icon  in the **Table Tools** tab to change the text in the table to vertical or horizontal direction.

To set the margin in table, follow the steps below:

- (1) Select the table, cells, or cell which you want to set the margin.
- (2) Click the **Margins** icon in the **Table Tools** tab. See below:

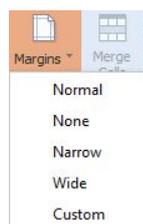

Figure 3.2-5 The Margins drop-down list

- (3) Choose one of the options in the drop-down list shown above. Or you can select **Custom** at the bottom to customize the margins. See below:

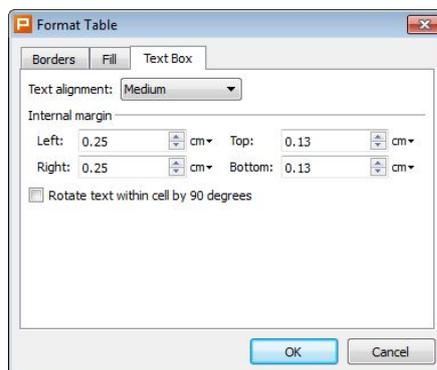

Figure 3.2-6 Customize margins in table

- (4) Enter the specific margin values in the **Internal margin** section.
- (5) Click **OK** to complete the operation.

3.2.4 Merge and Split Cells

Knowing how to merge or split table cells can come in handy when you are working within a table. You can merge two and more adjacent cells into one cell and split a cell which has been merged.

3.2.4.1 Merge Cells

To merge cells, follow the steps below:

(1) Select the cells which you want to merge into one cell.

(2) Click the **Merge Cells** icon  in the **Table Tools** tab to combine the selected cells.

3.2.4.2 Split Cells

To split a cell, follow the steps below:

(1) Select the cell that you want to split into multiple cells.

(2) Click the **Split Cells** icon  in the **Table Tools** tab and the **Split Cells** dialogue box will open and show as below.

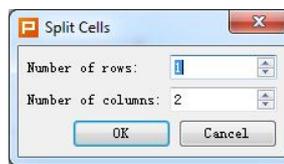

Figure 3.2-7 The Split Cells dialogue box

(3) Enter the number of columns and rows that you prefer to split the cell into in the **Number of rows** and **Number of columns** enter box.

(4) Click **OK** to complete the operation.

3.3 Picture

3.3.1 Insert Picture

Kingsoft Presentation allows you to easily brighten up your work by inserting an array of pictures.

To insert pictures from an external source, follow the steps below:

(1) Place the cursor to the point where you want to insert the picture.

(2) In the **Insert** tab, click the **Picture** icon  and open the **Insert Picture** dialogue box.

(3) Open the corresponding folder and click the desired picture displayed in the dialogue box. The selected file name will automatically be displayed in the **File name** text box.

(4) Click the **Open** button to insert the picture into the current document.

3.3.2 Picture Tools

Select the inserted picture to open the **Picture Tools** tab. The functions in this tab will allow you to adjust

and modify the inserted picture.

3.3.2.1 Change the Color of the Inserted Picture

To change the color of the inserted picture, follow the steps below:

- (1) Select the inserted picture and go to the **Picture Tools** tab.
- (2) Click the **Color** icon and open the **Color** drop-down menu. You can then choose any of the **Automatic**, **Grayscale**, **Black and White** and **Washout** options offered by the menu.
 - If you select **Automatic**, the picture will be in the same color as the original.
 - If you select **Grayscale**, the picture will change into shades of gray based on the original colors.
 - If you select **Black and White**, the picture will be converted into a pure black and white picture.
 - If you select **Washout**, the brightness and contrast of color of the picture will be changed into the style of the watermark images.
 - If you select the **Set Transparent Color** option at the bottom, the cursor will then change into a pen and the section which you click on the picture will become transparent.
 - The **More Contrast** icon and **Less Contrast** icon in the **Picture Tools** tab allow you to adjust the saturation of the image. The higher the contrast ratio, the less the shade of gray and the lower the contrast, the more the shade of gray.
 - The **More Brightness** icon and **Less Brightness** icon in the **Picture Tools** Tab allow you to adjust the brightness of the picture. The more the brightness, the more the shade of white and the less the brightness, the less the shade of white. See below:

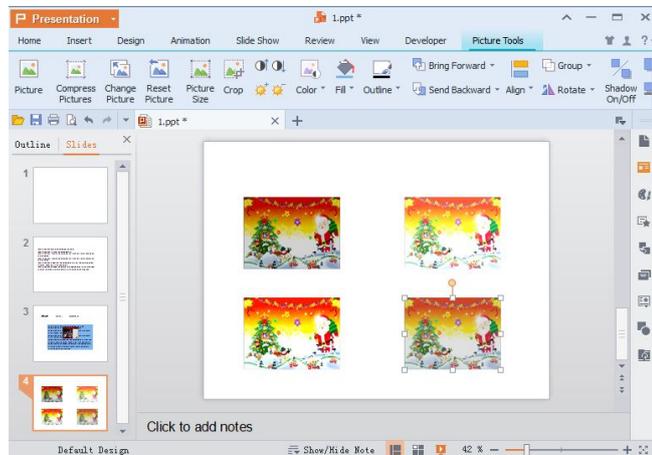

Figure 3.3-1 Change the color of the inserted picture

3.3.2.2 Compress Picture

To compress pictures, follow the steps below:

- (1) Select the picture and open the **Picture Tools** tab.
- (2) Select the **Compress Pictures** icon and open the **Compress Pictures** dialogue box shown as below:

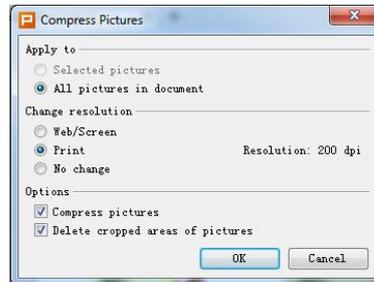

Figure 3.3-2 The Compress Pictures dialogue box

- (3) In the **Apply to** section, you can choose **Selected pictures** or **All pictures in document** options.
- (4) In the **Change resolution** section, select the type of resolution that you want to apply.
- (5) In the **Options** section, choose **Compress pictures** or the **Delete cropped areas of pictures** check box.
- (6) Click the **OK** button to compress the selected picture.

3.3.2.3 Change Picture

To change the original picture to another picture, follow the steps below:

- (1) Select the picture and open the **Picture Tools** tab.
- (2) Click the **Change Picture** icon in the **Picture Tools** tab or right-click the picture and select the **Change Picture** option in the context menu to open the **Change Picture** dialogue box.
- (3) In the **Change Picture** dialogue box, choose the picture which you wish to replace the original picture with.
- (4) Click the **Open** button to exit.
- (5) The original picture will be changed into the picture that you want and the document layout will be exactly the same as before.

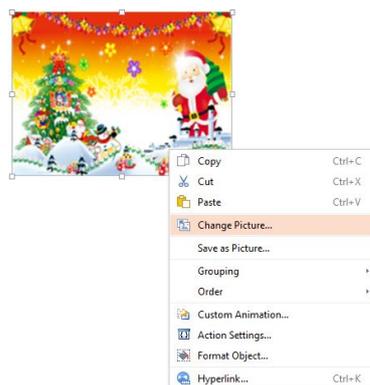

Figure 3.3-3 The Change Picture option

3.3.2.4 Reset Picture

To reset pictures back to their original format, follow the steps below:

- (1) Select the picture and open the **Picture Tools** tab.
- (2) Click the **Reset Picture** icon in the **Picture Tools** tab. All the formatting changes you have made to the picture will be discarded and the picture will return to its original format.

3.4 Chart

In Kingsoft Presentation, you can insert a chart to analyze data and present clearly to the audience. Just click the **Chart** icon in the **Insert** tab and a chart will appear. At the same time, Kingsoft Spreadsheets will also appear with the chart in it. You can edit the chart in the Spreadsheets which is one of the three office software offered by Kingsoft.

3.4.1 Organization Chart

To illustrate the reporting relationships in your company or organization, you can use **Organization Chart** in Presentation 2013. You can also add personal photos to associate each person with the related position in the organization chart.

In the **Insert** tab, select **Organization Chart** and an organization chart will be added in the slide as shown below.

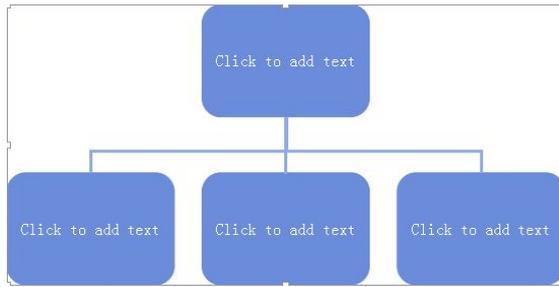

Figure 3.4-1 Organization Chart

The **Organization Chart** tab will open where you can edit the organization chart.

3.4.2 Add Subordinate

Select the member you want to add subordinate to and click **Add Subordinate** in the **Organization Chart** tab, a subordinate will be added to the selected member. See below:

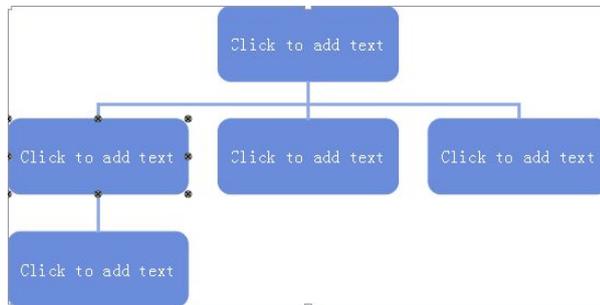

Figure 3.4-2 Add subordinate

3.4.3 Add Coworker

Select the member you want to add coworker to and click **Add Coworker** in the **Organization Chart** tab, a coworker will be added to the selected member. See below:

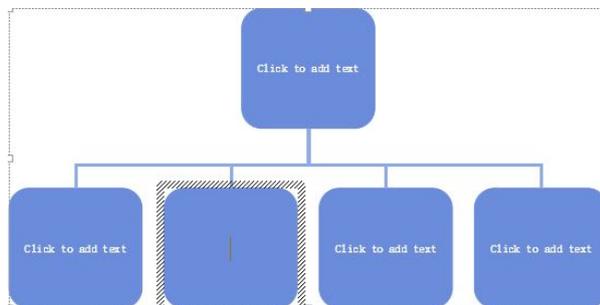

Figure 3.4-3 Add coworker

3.4.4 Add Assistant

Select the member you want to add assistant to and click **Add Assistant** in the **Organization Chart** tab,

an assistant will be added to the selected member. See below:

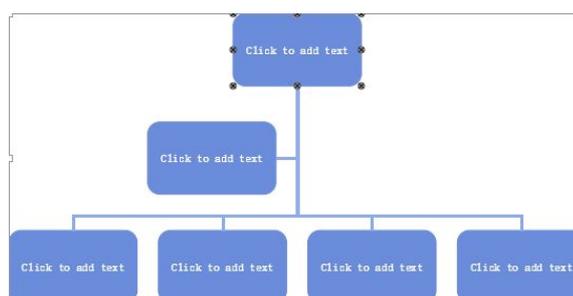

Figure 3.4-4 Add assistant

3.4.5 Delete Member

If you want to delete the member you have added, just select the member and click **Delete Member** in the **Organization Chart** tab. The member you selected will be deleted.

3.4.6 Change Organization Chart Layout

Kingsoft Presentation offers 4 types of chart layouts, namely **Standard**, **Both Hanging**, **Left Hanging** and **Right Hanging**. Users can change the layout by clicking the drop-down arrow of the **Layout** button and select the preferred style. See below:

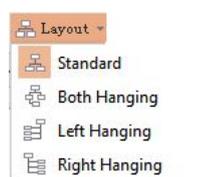

Figure 3.4-5 The Chart Layout drop-down list

Tips: If you don't like the style you set to your organization chart, click **Reset Layout** and the chart will return to the default layout.

3.4.7 Smart Choice of Organization Chart

To select the same level of members, same branch of members, all assistants, and all connecting lines, you could click the **Smart Choice** in the **Organization Chart** tab and choose the preferred option in the drop-down list. See below:

Figure 3.4-6 Smart Choice

3.4.8 Change Organization Chart Styles

Kingsoft Presentation offers 14 types of organization chart styles. Users can change the styles by selecting one of the styles offered. See below:

Figure 3.4-7 Organization chart styles

3.4.9 Shape Fill

Users can change the color of the members in the organization chart. You can click the drop-down arrow of the **Shape Fill** button and select the preferred color or fill pattern. See below:

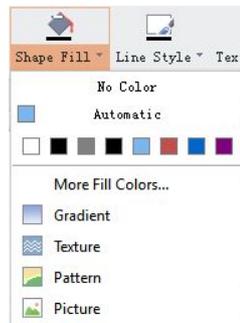

Figure 3.4-8 The Shape Fill drop-down list

Tips: The **Reset Shape** icon  allows users to discard all the formatting changes made to the selected shape.

3.4.10 Line Style

Users can change the line style of the members in the organization chart. You can click the drop-down arrow of the **Line Style** button and select your preferred line color, line pattern, weight, and dash style. See below:

Figure 3.4-9 The Line Style drop-down list

3.4.11 Text Color

Users can change the text color of the members in the organization chart. Click the drop-down arrow of the **Text Color** icon and select your preferred color for the text. See below:

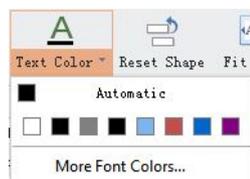

Figure 3.4-10 The Text Color drop-down list

Tips: The **Fit Text** icon  allows the text to fit to the shape of the members in the organization chart.

3.5 Link

In Kingsoft Presentation, hyperlinks taking the form of objects allows slides to be connected to web pages, e-mails and other files.

3.5.1 Action Settings

Actions can be added to a object after it is inserted. To do this, follow the steps below:

- (1) Select the object for which you want to add an action.
- (2) In the **Insert** tab, click the **Action** icon  and the **Action Settings** dialogue box will open and show as below:

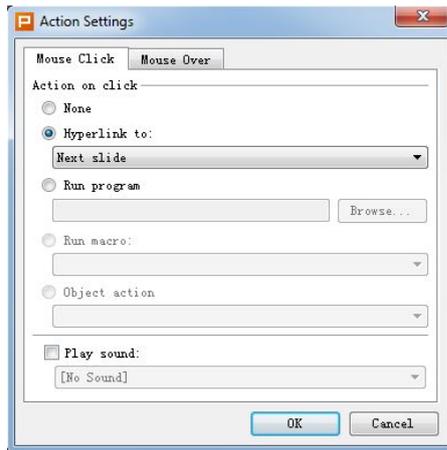

Figure 3.5-1 The Action Settings dialogue box

- (3) There are two tabs labeled as **Mouse Click** and **Mouse Over** in the **Action Settings** dialogue box.
- To remove any actions or to use no actions, select **None**.
 - To insert a link to another slide, web page, file, and presentation, select the **Hyperlink to** option button and choose one of the options provided in the drop-down list.
 - To run a program, select **Run program** and use the **Browse** button to choose the desired program.
 - To play a sound, select **Play sound** and choose one of the options provided in the drop-down list.
- (4) Click **OK** to complete the operation.

3.5.2 Hyperlinks

To create a hyperlink, follow the steps below:

- (1) Select the text to which you want to create a hyperlink.
- (2) Open the **Insert** tab and click the **Hyperlink** icon. The **Hyperlink** dialogue box will then open and show as below:

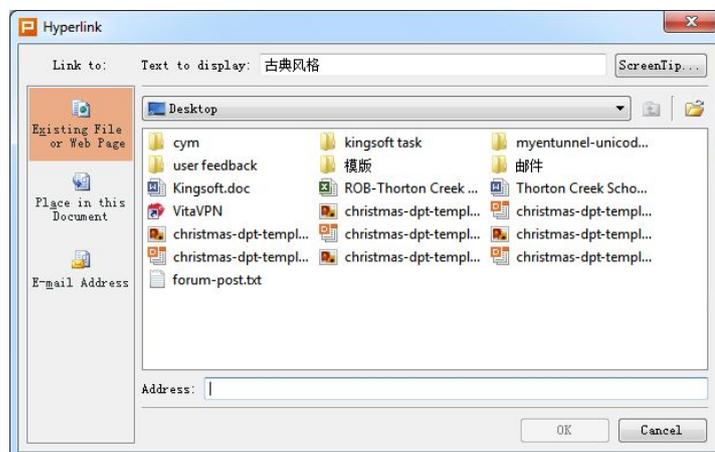

Figure 3.5-2 Create Hyperlink

(3) The **Text to display** box will show the text that you had selected in step (1). If you have selected a text, you can edit it directly.

(4) Select the type of hyperlink you want in the **Link to** tab.

- Select the **Existing File or Web Page** option and choose the text or web page address that you want to link to on the right.
- Select the **Place in this Document** option and the title or bookmark name of the current file will appear on the right. You can then choose the file position where you want to insert the link.

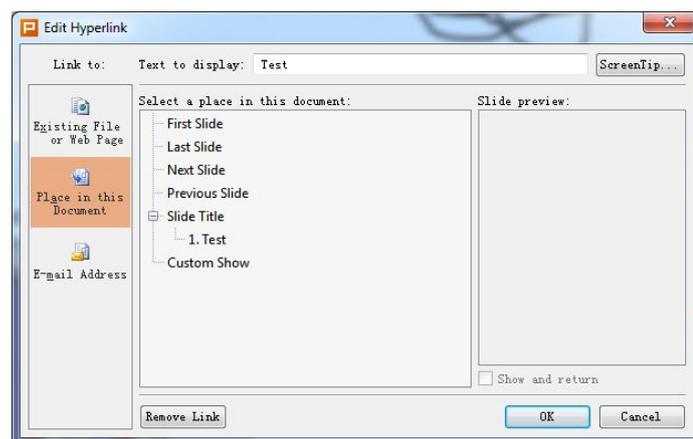

Figure 3.5-3 Edit Hyperlink

- Select the **E-mail Address** option, enter the E-mail address into the **E-mail address** text box, and enter the E-mail subject into the **Subject** box, shown as below:

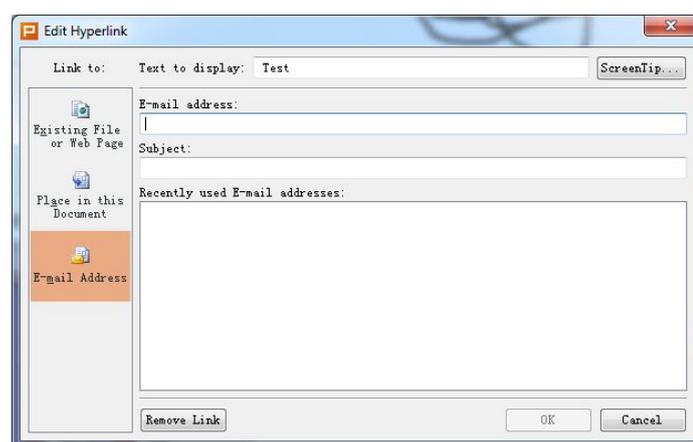

Figure 3.5-4 Edit hyperlink to link to Email address

(5) Click the **ScreenTip** button at the top right corner to open the **Set Hyperlink ScreenTip** dialogue box.

Enter the tips you want to show when putting the mouse pointer over the inserted hyperlink.

(6) Click **OK** to exit. The hyperlink you have created will be underlined and in the color blue.

3.6 Word Art

3.6.1 Insert WordArt

WordArt is a simple and convenient way to add special effects to text. Below are a few examples of the versatility provided by WordArt:

Figure 3.6-1 WordArt

To insert WordArt, follow the steps below:

- (1) Click the **WordArt** icon  in the **Insert** tab.
- (2) Choose one of the various WordArt styles offered in the **WordArt Gallery** and click **OK**.
- (3) In the **Edit WordArt Text** dialogue box, insert the text you want use as the WordArt content.
- (4) You can further customize your WordArt by the following operations:
 - To change the font type, select a font type from the **Font** list.
 - To change the font size, select an appropriate size from the **Size** list.
 - To make the text bold, click the  button.
 - To make the text italic, click the  button.
- (5) Click **OK** to complete the operation.

3.6.2 WordArt Tools

After the user inserted a WordArt, the **WordArt** tab will appear at the top of the window, which allows you to customize the effects, shape, alignment and other features of the inserted WordArt.

- **Insert WordArt**

To insert a WordArt by the **WordArt** tab, follow the steps below:

- (1) Select a WordArt that has already been created.
- (2) In the WordArt tab, click the **WordArt** icon . The **WordArt Gallery** dialogue box will open and show as below:

Figure 3.6-2 The WordArt Gallery dialog box

- (3) Select a WordArt style that you prefer and click **OK**.
- (4) Then the **Edit WordArt Text** dialog box will open for you to enter the content of the WordArt and set the font, font size and font format.
- (5) Click **OK** to complete the operation.

- **Edit WordArt Text**

In the **WordArt** tab, select **Edit Text** to modify the text. The steps are as follows:

- (1) Select the WordArt you want to edit.
- (2) Click the **Edit Text** icon  in the WordArt tab.
- (3) Insert the text you prefer in the **Edit WordArt Text** dialog box.
- (4) Click **OK**.

Tips: You can also double-click the selected WordArt to edit the text in the **Edit WordArt Text** dialog box.

- **WordArt Character Spacing**

You can adjust character spacing by **Character Spacing** in the **WordArt** tab. The steps are as follows:

- (1) Select the WordArt you wish to modify.
- (2) In the **WordArt** tab, click the **Character Spacing** icon  and choose one of the five character spacing options in the drop-down list, namely **Very Tight**, **Tight**, **Normal**, **Loose**, and **Very Loose**.
- (3) To manually customize the character spacing, select **Custom** at the bottom of drop-down list and enter the value of spacing in the **Custom** dialog box.
- (4) Click **OK**.

- **Same Letter Heights**

Click the **Same Letter Heights** button  to adjust the letters in the selected WordArt to the same height.

- **Vertical Text:**

Click the **Vertical Text** button  to change the text direction of the selected WordArt. You can use this feature to change horizontal text to vertical text.

- **WordArt Alignment**

Select **Alignment**  and choose the alignment you prefer in the drop-down list. Kingsoft Presentation provides six alignment styles. See below:

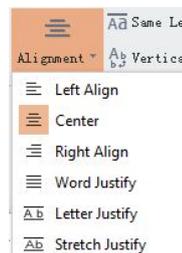

Figure 3.6-3 The WordArt Alignment list

- **WordArt Gallery:** Click this icon to open the **WordArt Galley** dialogue box.
- **Fill:** Click this icon to choose the color and effect for the WordArt in the drop-down list.
- **Outline:** Click this icon to set the color, width, and line style for outline of the selected WordArt.
- **WordArt Shape:** Click this icon to choose the shape of the WordArt in the drop-down list.
- **WordArt Size:** Click this icon to set the size, rotation degree, and scale of the selected WordArt.
- **Bring Forward:** Click this icon to bring the selected WordArt forward or up to the front.
- **Send Backward:** Click this icon to send the selected WordArt backward or to the back.
- **Group:** Click this icon to group the selected WordArt as a single object.
- **Rotate:** Click this icon to rotate or flip the selected WordArt.

3.7 Slide Number

The steps to add slide number to slides are as follows:

- (1) Position the insertion point in the placeholder or text box where you want to add the slide number.
- (2) Click **Slide Number** in the **Insert** tab.

Tips: To add slide number or date and time to each slide, use the **Header and Footer** icon in the **Insert**

tab. The slide number and date and time are positioned at default placeholder locations on each slide, which can be altered in the slide master.

3.8 Date and Time

To insert date and time, follow the steps below:

- (1) Position the insertion point in the placeholder or text box where you want to insert the date and time.

- (2) Click the **Date and Time** icon in the **Insert** tab. The **Header and footer** dialogue box will open and show as below:

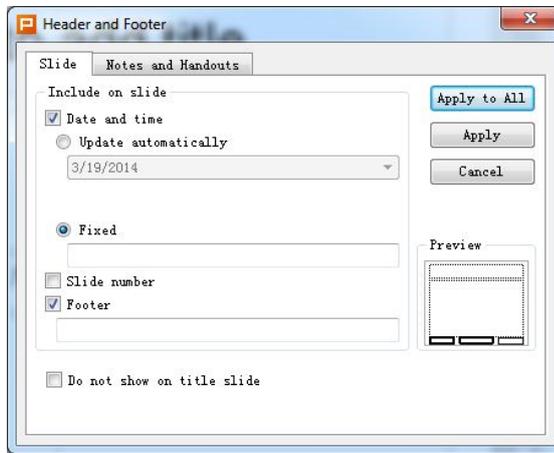

Figure 3.8-1 Insert Date and Time

- (3) Select the date and time format you desire in the **Date/Time** dialogue box.
- (4) Click **Apply** to add date and time to the current slide, or click **Apply to All** to add to all the slides.

Tips: In the **Notes and Handouts** tab, you can set the header and footer to the slides to be printed while they will not be displayed during your presentation.

3.9 Object

To insert an object, follow the steps below:

- (1) Open the **Insert** tab and click the **Object** icon. The **Insert Object** dialogue box will open and show as below:

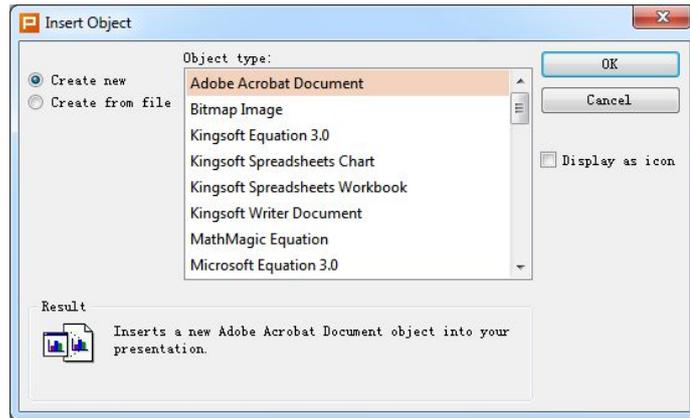

Figure 3.9-1 Insert Object

(2) Select the contents you would like to insert in the **Object type** list box and click the **OK** button.

Kingsoft Presentation also provides the function to insert objects located in other files. To do this, follow the steps below:

- (1) Put the insertion point to the place where you want to insert the text.
- (2) Open the **Insert** tab and select the **Object** icon.
- (3) In the **Insert Object** dialogue box, select **Create from File**.
- (4) Type in the file name or choose the preferred browse in the **Browse** dialogue box by clicking the **Browse** button under the **File name** enter box.

Tips: You can also click **File Object** in the **Insert** tab and select the preferred file.

3.10 Symbol

You can insert symbols in Kingsoft Presentation by clicking the drop-down arrow of the **Symbol** icon  in the **Insert** tab. You can either select one from the list or click **More Symbols** to open the **Symbol** dialogue box and select one there. See below:

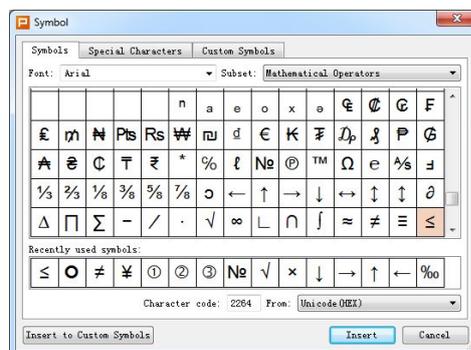

Figure 3.10-1 The Symbol dialogue box

3.11 Equation

To insert equation in Kingsoft Presentation, follow the steps below:

- (1) Put the mouse where you want to insert the equation.
- (2) Click **Equation** in the **Insert** tab and the **Equation Editor** dialogue box will open and show as below:

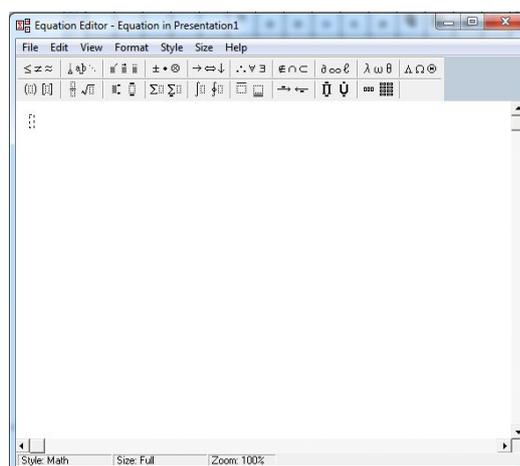

Figure 3.11-1 The Equation Editor

- (3) Enter the equation you need in the editor. When finished, just close the editor and the equation will be added in your slide. Double click the equation and you will be able to edit it again.

3.12 Media

In Kingsoft Presentation, the media content which can be inserted in slide includes sounds, movies, flash files, and other objects that can be set to play automatically or by clicking.

3.12.1 Movie

Unlike pictures and shapes, movies are linked to the presentation slides rather than embedded, which means a link to the location of the movie will be created when the movie is inserted in the slide. Therefore, if the location of the movie is changed, the slide will not be able to find or play the movie. You can avoid this problem by moving or copying the movie file into the same folder of the presentation itself.

A trigger effect will be added when inserting a movie, which allows the presenter to play and stop the movie with a click of the mouse button while the slide is being presented.

3.12.1.1 Insert Movie

To insert a movie in your slide, follow the steps below:

(1) Select the slide where you want to insert a movie.

(2) Click the **Movie** icon  in the **Insert** tab. The **Insert Movie** dialogue box will open and show as below. Select the movie you wish to insert and click **Open**.

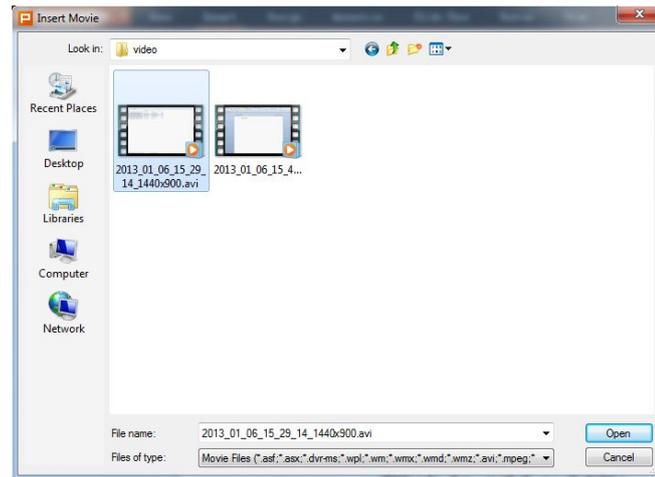

Figure 3.12-1 The Insert Movie dialogue box

(3) Then a dialogue box will pop up to offer you two ways to start the movie, namely **Automatically** and **When Clicked**. Choose the way you prefer.

Figure 3.12-2 How to start the movie

3.12.1.2 Play Movie

To play the movie you have inserted, right click it and select **Play Movie** in the context menu.

3.12.1.3 Edit Movie

To edit the movie you have inserted, right click it and select **Edit Movie Object** in the context menu. The **Movie Options** dialogue box will open and show as below:

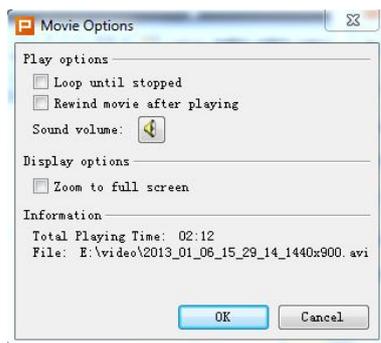

Figure 3.12-3 The Movie Options dialogue box

- Select **Loop until stopped** to play the movie in a continuous loop.
- Click the **Sound volume** button  and slide the bar to adjust the volume of the movie.
- Select **Zoom to full screen** to play the movie in full screen.

3.12.2 Sound

3.12.2.1 Insert Sound

To insert sound in you slide, follow the steps below:

- (1) Select the slide where you want to insert sound.
- (2) Click the **Sound** icon  in the **Insert** tab.
- (3) In the **Insert Sound** dialogue box, select the sound you want to insert and click **Open**.

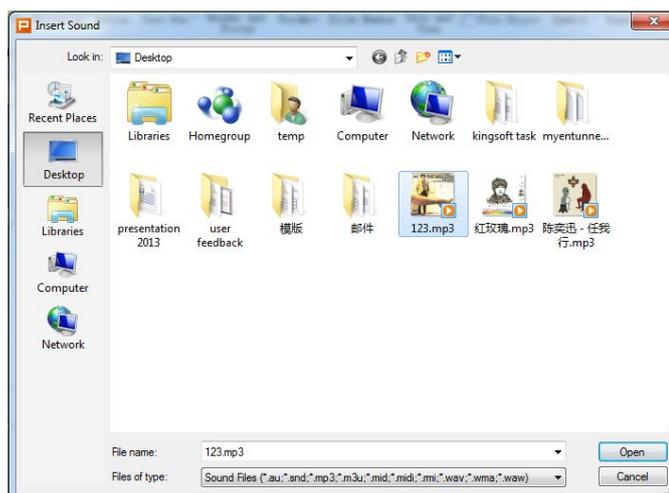

Figure 3.12-4 The Insert Sound dialogue box

- (4) Then a dialogue box will pop up to offer you two ways to start the music, namely **Automatically** and **When Clicked**. Choose the way you prefer.

Figure 3.12-5 How to start the music

- (5) When the sound is added to a slide, the audio icon  will appear on the slide.

3.12.2.2 Play Sound

To play the sound you have inserted, right click it and and select **Play Sound** in the context menu.

3.12.2.3 Edit Sound

To edit the sound you have inserted, follow the steps below:

- (1) Right-click the sound and select **Edit Sound Object** in the context menu. The **Sound Options** dialog box will open and show as below:

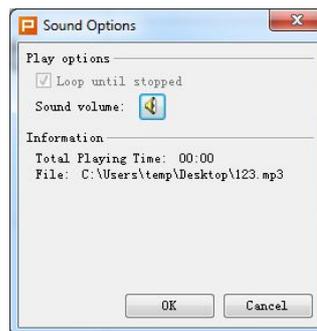

Figure 3.12-6 The Sound Options dialog box

- (2) Select **Loop until stopped** to loop the sound continuously.
- (3) Click the **Sound volume** button  and slide the bar to adjust the volume.
- (4) Click **OK** to complete the operation.

3.12.3 Flash

To insert flash files in slide, follow the steps below:

- (1) Select the slide in which you want to insert flash.
- (2) Click the **Flash** icon  in the **Insert** tab.
- (3) In the **Insert Flash Animation** dialog box, select the desired flash file and click **Open**.

Tips: Like with objects, you can also copy, cut, paste and group flash animations.

3.12.4 Background Music

You can insert background music to play during the presentation of your slides. Follow the steps below:

- (1) Click **Background Music**  in the **Insert** tab.
- (2) In the **Insert Background Music** dialogue box, select the music file you wish to use and click **Open**.
 - If the slide you have currently selected is your first slide, inserting background music will apply it accordingly.
 - If the slide you have currently selected is not your first slide, inserting background music will also apply it to the selected slide. However, a prompt will appear to remind you that the slides preceding the selected slide are without background music and offer to add background music to the preceding slide. See below:

Figure 3.12-7 Add background music to the preceding slide

- (3) Click **Yes** to add background music to the preceding slide.

Tips: An audio icon  will appear on the slide after inserting the background music.

You can use different types of background music in a presentation, but only one type of background music per slide.

Background music plays only when the slides are being presented.

3.12.4.1 Preview the Background Music

To preview the background music, right-click the music icon  and select **Play Sound** in the context menu. You can also double-click the icon to preview the background music.

3.12.4.2 Edit the Background Music

To edit the background music, right-click the music icon  and select **Edit Sound Object** in the context menu. The **Sound Options** dialogue box will open and show as below:

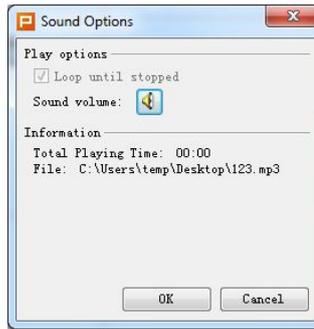

Figure 3.12-8 The Sound Options dialog box

Click the **Sound volume** button  and slide the bar to adjust the volume of the background music.

3.12.4.3 Delete the Background Music

To delete the background music, simply delete the audio icon from your slide. You can insert new background music to replace it.

4 Design Tab

4.1 Page Setup

To set the page, follow the steps below:

- (1) In the **Design** tab, click the **Page Setup** icon  and the **Page Setup** dialog box will open and show as below:

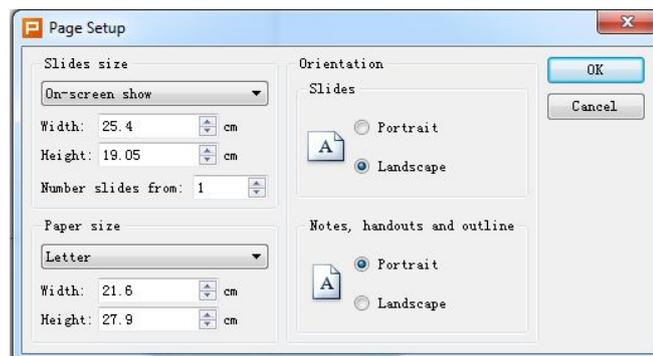

Figure 4.1-1 The Page Setup dialog box

- (2) You can set the slide size, paper size, and orientation in the dialog box.
- (3) Click OK to complete the operation.

Tips: You can also set the slide orientation by clicking the **Slide Orientation** icon in the **Design** tab and

choose the preferred option in the drop-down list.

4.2 Slide Orientation

You can set the orientation of the slides in Kingsoft Presentation. In **Design** tab, click the drop-down arrow of the **Slide Orientation** icon to select the landscape or the portrait style. See below:

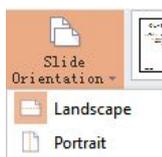

Figure 4.2-1 The Slide Orientation drop-down list

4.3 Design Templates

Design templates can change the entire look of your presentation by implementing different background graphics, color schemes, fonts, bullet points, place holders, and so on.

Kingsoft Presentation provides several different design templates for the user.

4.3.1 Apply Design Templates

In the **Design** tab, select a template for your presentation. Below are some of the available templates offered by Kingsoft Presentation.

Figure 4.3-1 Design Templates

To select design templates in the task window, follow the steps below:

- (1) In the **Design** tab, select a template and click it.
- (2) To apply a design template to all of the slides, right click the template you want to apply and select **Apply to All Slides** as shown below:

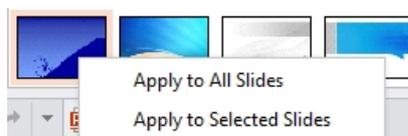

Figure 4.3-2 Apply to All Slides

- (3) To apply a design template to a single slide, select the slide, right click the preferred template, and

select **Apply to Selected Slides**.

Tips: To apply a blank design template, click the template named **Default Design**.

4.4 Color Scheme

Color schemes can be applied to one or all slides in a presentation. They set specific colors for different aspects of your presentation to create a streamlined look and feel for your presentation.

Color schemes control the colors of eight different features of each slide in the presentation. These features including but not limited to the **Background**, **Text and Lines**, **Shadows**, **Title Text**, **Fills**, **Hyperlinks**, and **Accents**. The colors of each of these features will automatically be set when a specific color scheme is chosen. A brief description of the features controlled by the Color scheme is shown as follows:

- **Background:** The background is the canvas for each and every slide. It is a critical feature in slide design.
- **Text and Lines:** All objects created with the text tools and drawing tools are included in this category. It is important to choose a color that contrasts with the background.
- **Shadows:** Shadows enhance the display of objects on slides. It is better to have a darker shadow color compared to the background in order to highlight the shadow effect.
- **Title Text:** Like text and lines, the title text color should contrast with the background in order to be noticeable.
- **Fills:** Fills set the color of basic shapes and other objects created with the drawing tools.
- **Accent:** Accents are used to highlight important text and can be used to emphasize key points.
- **Accent and hyperlink:** These accents control the colors of hyperlinks.
- **Accent and followed hyperlink:** These accents control the colors of hyperlinks that have already been clicked.

4.4.1 Apply Color Schemes

To apply color schemes, follow the steps below:

- (1) In the **Design** tab, click the **Color Scheme** icon  and the **Color Schemes** task window will appear on the right. See below:

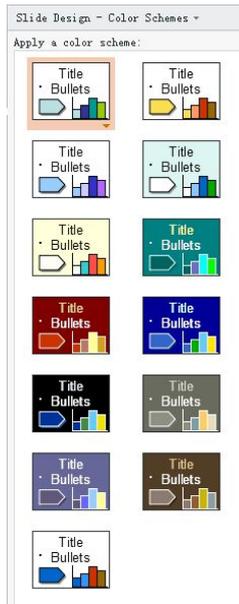

Figure 4.4-1 Color Schemes

(2) Choose a color scheme in the **Apply a color scheme** list box.

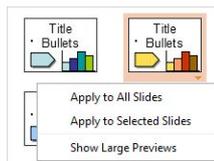

Figure 4.4-2 Apply the color scheme

- To apply a color scheme to all of the slides, select the color scheme or click the arrow next to the color scheme and select **Apply to All Slides**.
- To apply a color scheme to a single slide, click the arrow next to the color scheme and select **Apply to Selected Slides**.
- To show large previews, select the slides and click the arrow next to the color scheme and select **Show Large Previews**.

4.4.2 Custom Color Scheme

Color schemes can be customized to fit the needs of individual user. If the default color schemes do not suffice, users can create their own color schemes.

To create a custom color scheme, follow the steps below:

- (1) In the **Design** tab, click **Color Scheme** to open the task window.
- (2) Select a color scheme to edit in the task window.
- (3) Click **Edit Color Schemes** at the bottom of the task window. The Edit Color Schemes dialogue box

will open.

(4) Select the **Custom** tab in the dialogue box. See below:

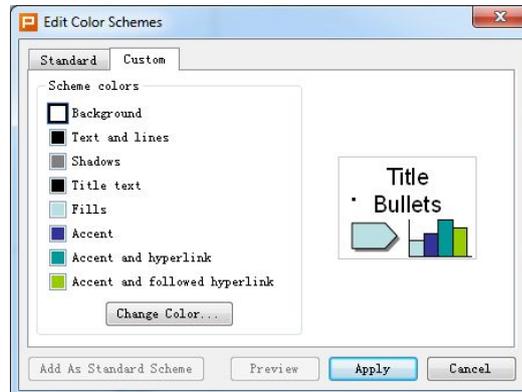

Figure 4.4-3 Customize color schemes

(5) Click **Change Color** at the bottom to choose the color for the **Background**, **Text and Lines**, **Shadows**, etc. You can customize the color for eight different aspects of the color scheme.

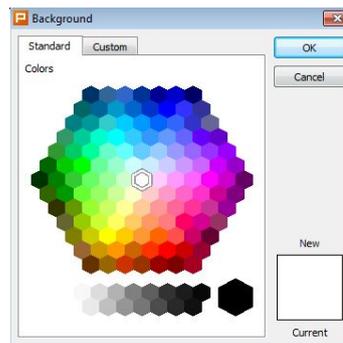

Figure 4.4-4 Change the color for the color scheme

(6) Click **OK** to save the change.

(7) The custom scheme can be added to the standard color schemes tab for future use by selecting **Add as Standard Scheme**.

(8) Selecting **Apply** will apply the color scheme to all of the slides in the current presentation.

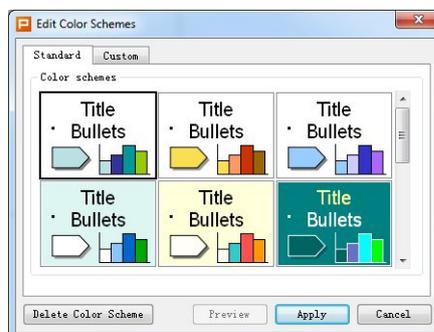

Figure 4.4-5 Manage the Color Schemes

4.5 Edit Slide Master

Kingsoft Presentation provides the master slide function for the user. By setting and editing the master slide, the user could control and make changes to all the slides more conveniently.

Click the **Edit Slide Master** icon in the **Design** tab and the **Slide Master** tab will open and show as below:

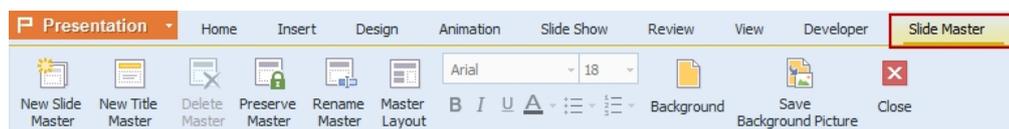

Figure 4.5-1 The Slide Master tab

The functions provided in this tab are shown as below:

- **New Slide Master:** Insert a new slide master.
- **New Title Master:** Insert a slide master with a new title style.
- **Delete Master:** Delete the selected slide master.
- **Preserve Master:** Preserve the selected master slide.
- **Rename Master:** Rename the selected master slide.
- **Master Layout:** Set the placeholder elements contained in the slide master.
- **Font Style:** Set the font, font size, bold style, italic style, underline style, and font color for the text in the master slide.
- **Bullets and Numbering:** Add bullets or numbering to the selected text in the master slide.
- **Background:** Set the background color for the current slide or the whole presentation.
- **Save Background Picture:** Save the slide background as a picture.
- **Close:** Close the slide master view.

4.6 Slide Layout

To set the slide layout, follow the steps below:

- (1) Click the **Slide Layout** icon in the **Design** tab. The **Slide Layout** task window will open on the right.

See below:

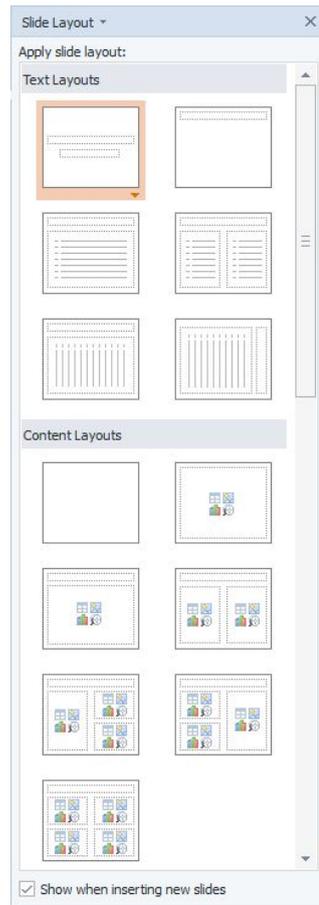

Figure 4.6-1 The Slide Layout task window

- (2) Click the preferred layout in the **Apply slide layout** list box to apply it to the current slide.
- (3) Select the preferred layout and click the arrow below it to open the drop down list where you can choose to apply the layout to selected slides, reapply the layout, and insert new layout. See below:

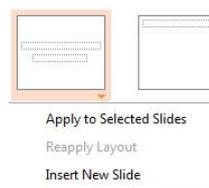

Figure 4.6-2 Apply layout

4.7 Background

The background color and design of every slide can be changed and these changes can be applied to every slide for your convenience.

4.7.1 Change the Slide Background

To change the background of the slide, follow the steps below:

- (1) In the **Design** tab, click the arrow of the **Background** icon  and choose **Background** in the drop-down list. The **Background** dialogue box will open and show as below:

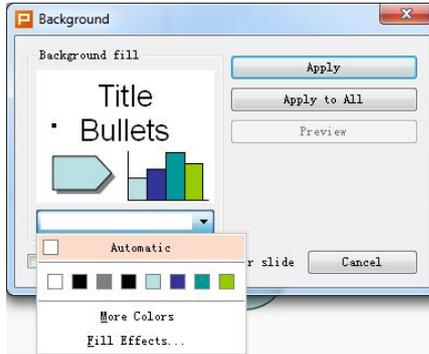

Figure 4.7-1 The Background dialogue box

- (2) In the **Background** dialogue box, click the arrow under **Backdrop fill** and you will be presented with the following options:

- Choose one of the eight colors displayed.
- To select a color outside of the color scheme, click **More Colors**. Choose a color from either the **Standard** tab or the **Custom** tab and click **OK**.
- To change the gradient, texture, pattern or picture, click **Fill Effects**. The following dialogue box will open:

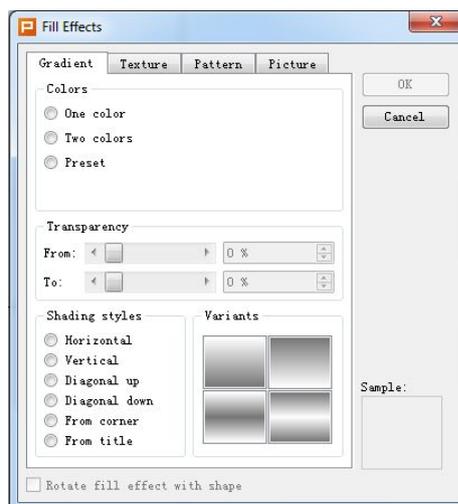

Figure 4.7-2 Fill Effects

- To apply a gradient to the backdrop, go to the **Gradient** tab and select a color style, transparency, and

shading style. Click **OK** to apply the changes.

- To apply a texture to the backdrop, go to the **Texture** tab and select a texture. Custom textures can be applied by selecting a file with the **Other Texture** button. Click **OK** to apply the changes.
- To apply a pattern to the backdrop, go to the **Pattern** tab and select a pattern, foreground and background color. Click **OK** to apply the changes.
- To use a picture for the backdrop, go to the **Picture** tab and select a picture file through the **Select Picture** button. Click **OK** to apply the changes.

(3) You can click **Apply** or **Apply to All** to either apply the background to the current slide or all the slides.

5 Animation Tab

5.1 Custom Animation Effects

Kingsoft Presentation offers several animation effects that can be applied to text, pictures and other content. These animation effects are easy to use and allow the user to make each and every slide unique.

The settings of each animation effect can be adjusted to fit all kinds of needs. These settings allow the user to customize the motion path, speed and duration of each animation effect.

If there are animation effects on a slide, they will appear in order and can be rearranged within the **Custom Animation** task window.

Tips: Animation schemes can be used to simplify and speed up the designing process of animation effects.

5.1.1 Types of Custom Animation

There are three general categories for custom animation effects in Kingsoft Presentation.

- There are 52 different **Entrance Effects** which control how objects initially appear on the slides.
- There are 31 different **Emphasis Effects** which control the actions that objects perform on the slides.
- There are 52 different **Exit Effects** which control how objects disappear from the slides.

5.1.2 Add Animation to Text or Objects

To insert an animation effect, follow the steps below:

(1) Choose a slide containing text or other objects. Select the text or objects to which you want to add animations.

(2) In the **Animation** tab, click **Custom Animation**  and the **Custom Animation** task window will appear on the right.

(3) In the **Custom Animation** task window, click the **Add Effects** icon  and the following options will become available in the drop-down list:

- Choose **Entrance** in the drop-down list to add an animation effect to the object when entering the slide.
- Choose **Emphasis** in the drop-down list to make an object perform a special effect when presenting the slide.
- Choose **Exit** in the drop-down list to add an animation effect to the object when exiting the slide.
- Choose **Motion Paths** to designate a specific path for the object to follow on the slide.

Tips:

- After applying animation effects to objects, number markers will appear on the objects. These markers indicate the order that the animations will perform when presenting the slide and the ordered list can be found in the task window. However, these markers will not be shown when the presentation is in the **Slide Show** mode.
- Selecting **Play** in the **Custom Animation** task window will show a preview of the animations.
- Click the **Slide Show** button to preview the slide in the **Slide Show** mode with all of the animation effects included.

5.1.3 Modify Animation of Text or Objects

In the **Animation** tab, click the **Custom Animation** icon . The **Custom Animation** task window will appear on the right. Another method is to select the object to be modified, right-click it, and choose **Custom Animation** in the context menu. Modifications can be made in the **Custom Animation** task window.

- Modify when to start the animation effects by choosing among the three **Start** options: **On Click**, **With Previous**, and **After Previous**. **On Click** will start the animation effect when the presenter clicks the mouse. **With Previous** will start the animation effect at the same time as the animation

effect preceding it. **After Previous** will start the animation effect after the animation effect preceding it has finished.

- Modify the direction objects enter or exit the slide form with the **Direction** option. Some animation effects do not have this option due to the nature of the animation effect.
- Modify the time necessary for an animation effect to perform with the **Speed** option. The available options are **Very Slow**, **Slow**, **Medium**, **Fast**, and **Very Fast**. See below:

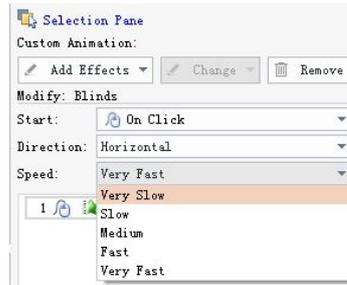

Figure 5.1-1 Modify animation

The following steps describe another method of modifying the **Speed**:

- (1) In the **Animation** tab, click **Custom Animation**. 
- (2) Select the animation effect to be modified in the **Custom Animation** task window and click the drop-down arrow at the end.
- (3) Select **Show Advanced Timeline** in the drop-down list and the result should resemble Figure 5.1-2.

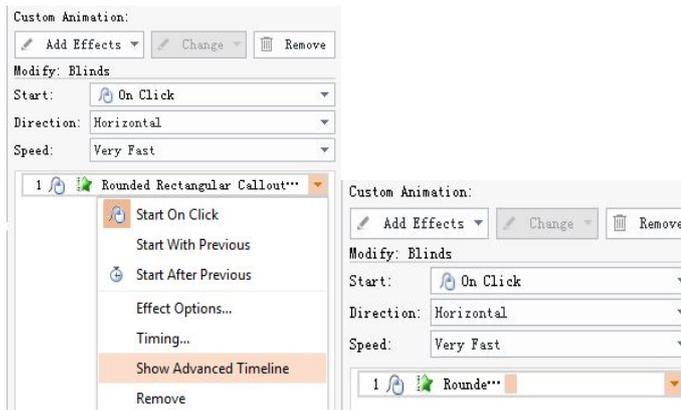

Figure 5.1-2 Show Advanced Timeline

- (4) Upon moving the mouse over a time block, the cursor will change to a re-sizing arrow that allows you to click and drag the time blocks.
- (5) Drag the time blocks to modify the duration of the animation effects.

5.1.4 Change Animation of Text or Objects

To change the animation effects of one or more objects, select them in the **Custom Animation** task window and click **Change**, as shown below:

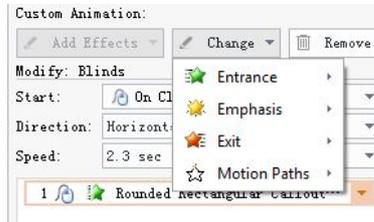

Figure 5.1-3 Change animation

Choose the animation effect you want to change with in the drop-down list.

5.1.5 Rearrange the Order of Animation Effects

To rearrange the order of animation effects, take the following steps:

- (1) Select the slide with the animation effects which need to rearrange.

- (2) Click **Custom Animation**  in the **Animation** tab.

- (3) Select the animation effect that needs to be rearranged in the **Custom Animation** task window and drag it to form the desired order.

5.1.6 Remove Animation Effects

To remove animation effects, take the following steps:

- (1) Select the animation effect that you want to delete in the **Custom Animation** task window.
- (2) Click **Remove**  or right-click and select **Remove** in the drop-down list as shown in Figure 5.1-4.

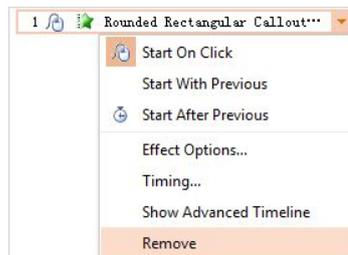

Figure 5.1-4 Remove Custom Animation

5.2 Set Motion Path Animations

The **Motion Path** function creates an animation effect path for text and other objects to follow. Users can use the default paths, edit the default paths or create their own custom motion paths.

5.2.1 Apply Default Motion Path

The Motion Path function assigns a path for text and objects to follow. To create a motion path animation effect, follow these steps:

- (1) Choose a slide with text or other objects you want to assign a path to and select the text or object.
- (2) In the **Animation** tab, click **Custom Animation**  to open the **Custom Animation** task window.
- (3) In the **Custom Animation** task window, click **Add Effects**, select **Motion Paths**, and choose a path for the text or object.

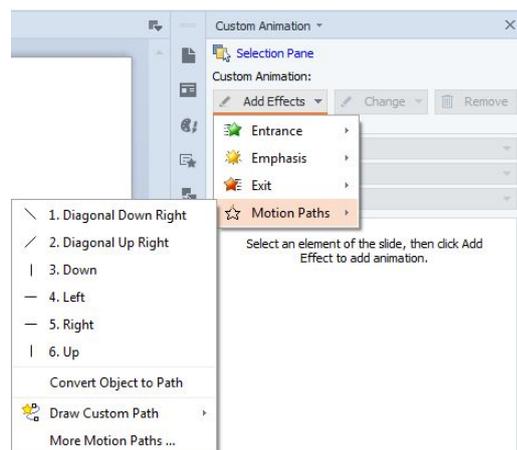

Figure 5.2-1 Apply a path

5.2.2 Adjust the Size of Motion Path

Motion paths are considered as objects in Kingsoft Presentation and have eight control points when they are selected. As a result, the size, position and rotation of motion paths are adjustable.

The size of both default and custom paths can be adjusted by the follow steps:

- (1) Select the path to be edited.
- (2) In the **Animation** tab, click **Custom Animation**  to open the **Custom Animation** task window.
- (3) In the **Custom Animation** task window, click **Add Effects** and select **Motion Paths**. Click **Draw**

Motion Paths and select a path in the drop-down list. The **S Curve** path is chosen in the following example:

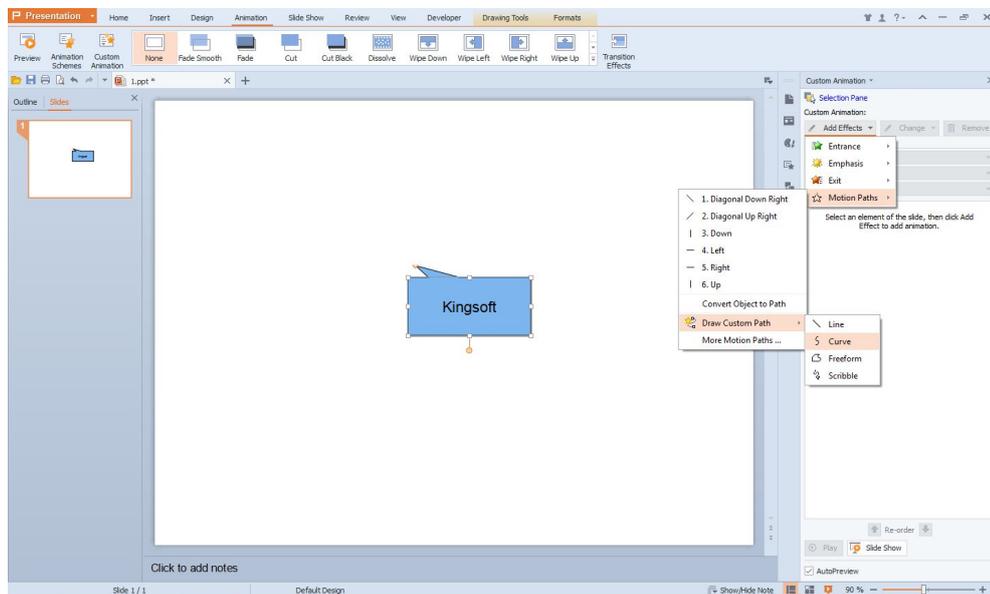

Figure 5.2-2 S Curve motion path

(4) Click the path and eight control points will appear as shown in figure 5.2-3.

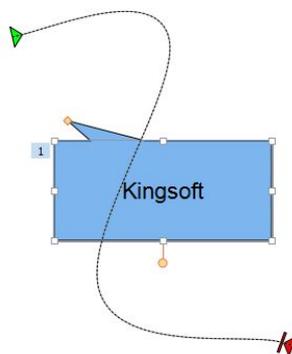

Figure 5.2-3 Adjust the path size

(5) Select one of the control points and drag it to adjust the size of the path.

5.2.3 Adjust the Position of Motion Path

After selecting a motion path, the cursor will become a  when you move the mouse over it. Left-click and drag the mouse button to relocate the path. However, the text or object associated with the path will not move. When the animation plays, the corresponding object will start from the path head, move along

the path, and to the path end.

The text or object will move according to the path if the motion path is unlocked. Accordingly, the text or object will not move when the motion path is locked. To lock the motion path, follow the steps below:

- (1) Select the path.
- (2) In the **Custom Animation** task window, select **Locked** in the **Path** drop-down list box shown as follows:

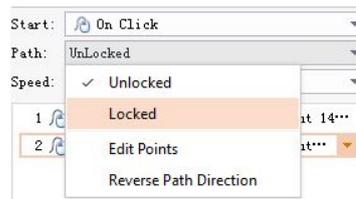

Figure 5.2-4 Lock the path

- (3) Click the **Slide Show** button or press F5 to view the animation. You will see that the text or object will jump to the starting point of the motion path in queue.

5.3 Transition effect

Transition effects are special effects that occur between slides in the Slide Show mode. Kingsoft Presentation 2013 provides 60 different transition effects to meet almost all of your needs. The **Slide Sorter View** serves as a convenient way to view all of the slides in your presentation for inserting transition effects.

5.3.1 Set the Transition Effect

In the **Animation** tab, there are previews of the different kinds of transition effects available. See below:

Figure 5.3-1 Transition Effect showcase

The **Transition Effects** task window offers additional options for transition effects, including transition type, speed, and sound.

5.3.1.1 Apply Transition Effect to A Slide

Each slide can have a unique transition effect in Kingsoft Presentation. In the following example, the **Wedge** transition effect will be applied to a new slide. The steps are as follows:

(1) In the **View** tab, click **Slide Sorter** . Another way is to click the **Slide Sorter View** button , which is located right below the window to switch to the Slide Sorter View.

(2) Open the **Animation** tab and click **Transition Effects** . The **Slide Transition** task window will appear on the right.

(3) Select the slide and choose **Wedge** in the **Apply to selected slides** section of the **Slide Transition** task window.

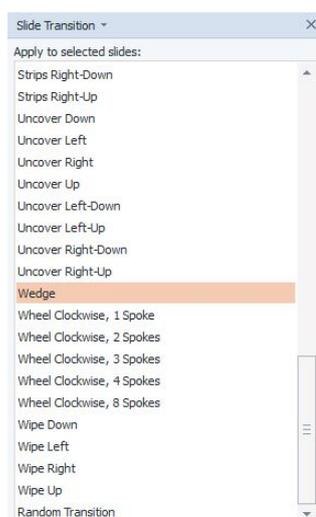

Figure 5.3-2 Select the Transition Effect

(4) In the **Modify transition** section, select **Medium** in the **Speed** drop-down list and **Applause** in the **Sound** drop-down list.

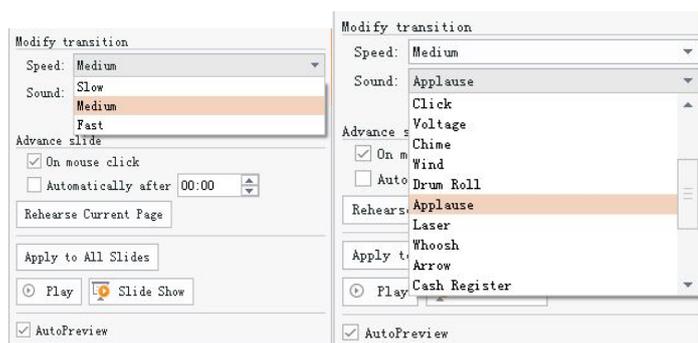

Figure 5.3-3 Set the speed and sound for transition effect

(5) Select the **Loop until next sound begins** check box right under the sound list.

(6) Select the **on mouse click** check box in the **Advance slide** section.

After finalizing the settings, an animation icon  will appear on the top left of the slide.

5.3.1.2 Apply Transition Effect to Multiple Slides

Kingsoft Presentation provides different ways to apply transition effects to multiple slides at a time.

- **Apply transition effects to nonadjacent slides**

To apply a transition effect to multiple slides at a time, do as follows:

(1) In the **Animation** tab, click **Transition Effects** . The **Slide Transition** task window will appear on the right.

(2) Hold the <Ctrl> key and select the nonadjacent slides.

(3) Select **Wedge** in the **Apply to selected slides** section of the **Slide Transition** task window. In the **Modify transition** section, select **Medium** in the **Speed** drop-down list and **Applause** in the **Sound** drop-down list. Select the **on mouse click** check box in the **Advance slide** section.

After finishing the settings, an animation icon will appear on the up left of the selected slides.

- **Apply transition effects to all slides**

(1) Open the **Animation** tab and click **Transition Effects** . The **Slide Transition** task window will appear on the right.

(2) Select a slide.

(3) Select **Wedge** in the **Apply to selected slides** section of the **Slide Transition** task window. In the **Modify transition** section, select **Medium** in the **Speed** drop-down list and **Applause** in the **Sound** drop-down list. Select the **on mouse click** check box in the **Advance slide** section.

(4) Click **Apply to All Slides**.

After finishing the settings, an animation icon will appears on the up left of all the slides.

Tips: When a presentation contains multiple masters, the **Apply to Master** button will appear in the **Slide Transition** task window. Click the button to apply the transition effects to the corresponding master.

5.4 Slide Preview

There are several ways to preview transition effects. See below:

- After adding a transition effect, go to the **Animation** tab and click **Preview** .

- After adding a transition effect, go to the **Slide Transition** task window and click **Play** .

- To preview as a slide show, click **Slide Show**  in the **Slide Transition** task window.
- In the **Slide Transition** task window, select a transition effect in the **Apply to selected slides** section and select the **AutoPreview** check box on the bottom.

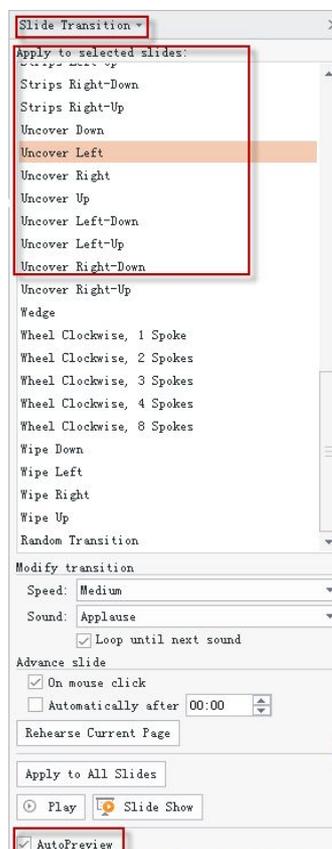

Figure 5.4-1 Slide Transition preview

Tips: To remove the animation scheme, click **Animation Schemes** icon in the **Animation** tab and select **No Animation** in the **Apply to selected slides** section of in the **Animation-Schemes** task window.

6 Slide Show Tab

6.1 Start Slide Show

The purpose of Kingsoft Presentation is to allow users to create presentations that can be presented as slide shows. When the slide show starts, the slides are re-sized to the full screen.

You can set where to start your slide show in Kingsoft Presentation. You can start from the beginning, from the current slide, or create a custom slide show.

6.1.1 Start from the Beginning

To begin the slide show from the beginning, choose one of the following ways:

- Click **From Beginning**  in the **Slide Show** tab.
- Select the first slide and click **Slide Show**  at the bottom right of the window.

6.1.2 Start from the Current Slide

To begin the slide show from the current slide, choose one of the following ways:

- Click **From Current Slide**  in the **Slide Show** tab.
- Select the current slide and click **Slide Show**  at the bottom right of the window.

6.2 Custom Slide Shows

6.2.1 Define Custom Slide Show

To customize the slide show to only display selected slides instead of the entire presentation, do the following:

- (1) In the **Slide Show** tab, click **Custom Slide Shows** . The **Custom Slide Shows** dialogue box will appear.
- (2) In the **Custom Slide Shows** dialogue box, click **New** .
- (3) The **Define Custom Show** dialogue box will appear for you to select the slides you want to add to the custom slide show. Click **Add** to confirm the choices.

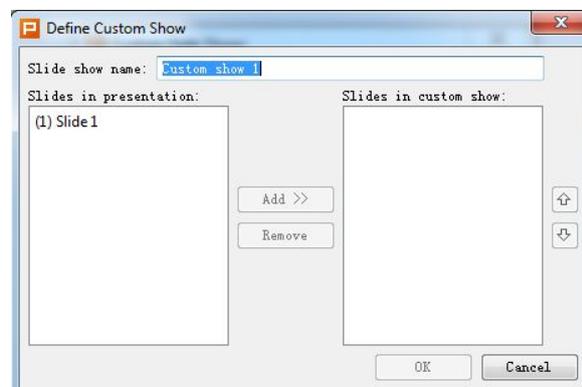

Figure 6.2-1 The Define Custom Show dialogue box

- To select multiple slides, select a slide, and then press and hold <Ctrl> while selecting other slides.
 - To reorder the slides, select a slide in the **Slides in custom show** list. Click the arrow buttons to move the selected slides up and down the list.
- (4) In the **Slide show name** box, enter a name.
 - (5) Click **OK** to return to the **Custom Slide Shows** dialogue box.
 - (6) Click **Show** to preview the custom slide show.

6.2.2 Remove Custom Slide Show

To remove a custom slide show, take the following steps:

- (1) Select **Custom Slide Shows**  in the **Slide Show** tab.
- (2) In the **Custom Slide Shows** dialogue box, select the custom slide show you need to remove and click **Remove** .
- (3) Click **Close** when finished.

Tips: When removing a custom slide show, slides will remain in the corresponding presentation, but will no longer be marked as being part of a custom slide show.

6.3 Slide Show Settings

6.3.1 Set the Show Type

Kingsoft Presentation allows users to create presentations in the form of slide shows for both speakers and for kiosks. These two different show types can meet the needs of different situations. To set the show type, follow the steps below:

- (1) Select **Set Up Show**  in the **Slide Show** tab. The **Set Up Show** dialogue box will open and show as in Figure 6.3-1.
- (2) In the **Show Type** section, choose the type of slide show you need. See below:

Figure 6.3-1 Slide Show settings

6.3.2 Presented by a Speaker

A slide show presented by a speaker is the most common used type as well as the default show type. The flow of the presentation is controlled this way and the speaker can choose to use the autoplay function. This function allows the speaker to stop, add details, record narration, use the pen tool, and exit the show by pressing <Esc>. This show type can be modified by the following steps:

- (1) Click **Set Up Show**  in the **Slide Show** tab. The **Set Up Show** dialogue box will open and show as in Figure 6.3-2.
- (2) In the **Show Type** section, select **Presented by a Speaker**.
- (3) In the **Show slides** section, set the page range to be presented. **All** is the default option. See below:

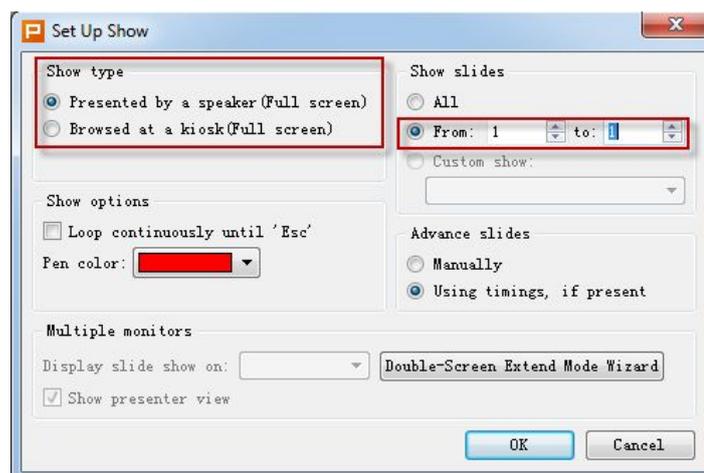

Figure 6.3-2 Modify the show type

- (4) To loop the slide show continuously, go to the **Show option** section and check **Loop continuously until 'Esc'**.
- (5) Click **OK** to complete the operation.

There are three ways to start a slide show:

- Click **Slide Show**  at the bottom right of the window.
- Select **From Current Slide**  in the **Slide Show** tab.
- Press <F5> to start show from the current slide.

If the animations in the presentation are set to start when clicked, they will be unable to show. If the animations are set to start with the previous, then the next animations will start automatically.

6.3.3 Browsed at a Kiosk

The presentation will play automatically when the slide show type is set to **Browsed at kiosk**. This type of slide show is appropriate for shows in an exhibition or conference where a speaker or presenter cannot control the slide show. This type of show is similar to **Presented by speaker**, but the flow of the presentation cannot be controlled with a mouse. To set the show type to **Browsed at kiosk**, take the following steps:

- (1) Click **Set Up Show**  in the **Slide Show** tab. The **Set Up Show** dialogue box will open and show as in Figure 6.3-3.
- (2) In the **Show Type** section, select **Browsed at a kiosk**.
- (3) In the **Show slides** section, set the range of the pages to be presented. **All** is the default option. See below:

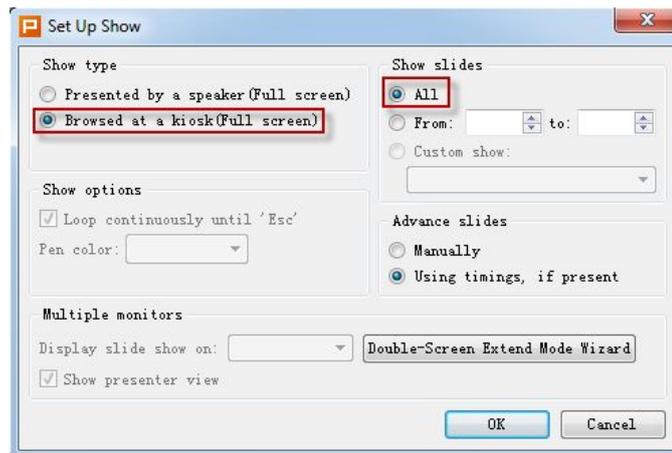

Figure 6.3-3 Browsed at a kiosk

- (4) Click **OK** to complete the operation.

The browsed at a kiosk show type is similar to the presented by speaker show type. If the animations in the presentation are set to start when clicked, they will be unable to show. If the animations are set to start with

the previous, then the next animations will start automatically.

Browsed at a Kiosk show types will loop continuously by default. To exit the show, simply press <Esc>.

6.4 Hide Slide

To hide certain slides during a slide show without deleting them, follow the steps below:

(1) Select the slide you want to hide.

(2) Open the **Slide Show** tab and select **Hide Slide**  to hide the selected slide during the slide show.

(3) Next to the hidden slide, the hidden slide icon  will appear with the slide number inside.

Tips: To remove the hide slide operation, select the slide and click **Hide Slide** again.

6.5 Rehearse Timings

Rehearse Timing is used to control the time of the presentation accurately. To do this, follow the steps below:

(1) In the **Slide Show** tab, select **Rehearse Timings**  to rehearse the show.

(2) A **Rehearsal** toolbar will appear on the top left and the time in the middle of the toolbar represents the timing for the current slide. The time on the right represents the timing for the entire presentation. See below:

Figure 6.5-1 The Rehearsal toolbar

- Click the **Next** button  to complete the rehearsal time for the current slide and to begin the timing for the next slide. You can also apply this feature by clicking the slide.
- Click the **Pause** button  to pause the timing of the current slide.
- Click the **Repeat** button  to reset the current slide timings.

(3) When the slide show is over, the system will prompt you on whether to keep the rehearsal timing or not. Click **Yes** to set the slides to switch at the rehearsed times.

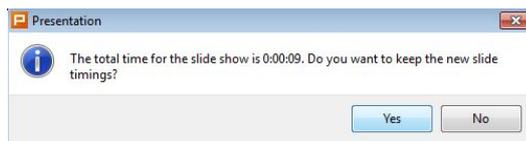

Figure 6.5-2 Rehearsal time prompt

6.6 Speaker Notes

Speaker notes in Kingsoft Presentation are notes added to the presentation slides as a reference for the presenter. When playing the presentation on a projector, the presenter can view the speaker notes but the audience will not be able to see them.

When you create the slide show, you can add important key points to each slide, so that when presenting the slide show, you or the presenter will follow these hints for a complete presentation. The presenter can also print these notes out as a handy material.

6.6.1 Add Speaker Notes

Under each slide, there is an area for you to add notes. Click the notes area to enter speaker notes. Or you can click the **Speaker Notes** icon  to enter speaker notes.

6.6.2 Show Speaker Notes During the Presentation

Set the slide show in the **Presented by a speaker** mode, and when play the slide show, right click the slide and select **Speaker Notes**. Then the **Speaker Notes** window will open in the middle of the computer screen(not the projector). See below:

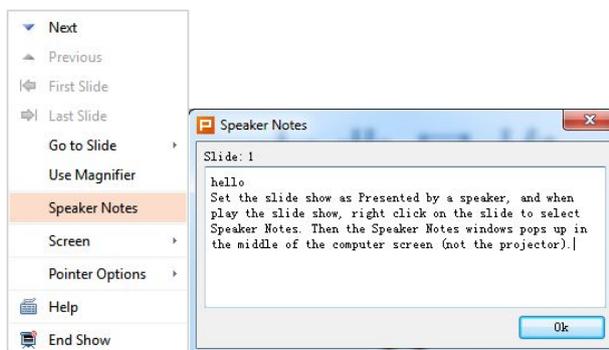

Figure 6.6-1 Speaker Notes

7 Review Tab

7.1 Spelling Check

Kingsoft Presentation provides the check spelling function when you type words in slides. Select the words you have typed and click **Check Spelling**  in the **Review** tab. The **Spelling** dialogue box will open and show as below. Select the suggested words if it's proper. Select **Change** or **Change All** to use the suggested word. You can also ignore them by selecting **Ignore** or **Ignore All**.

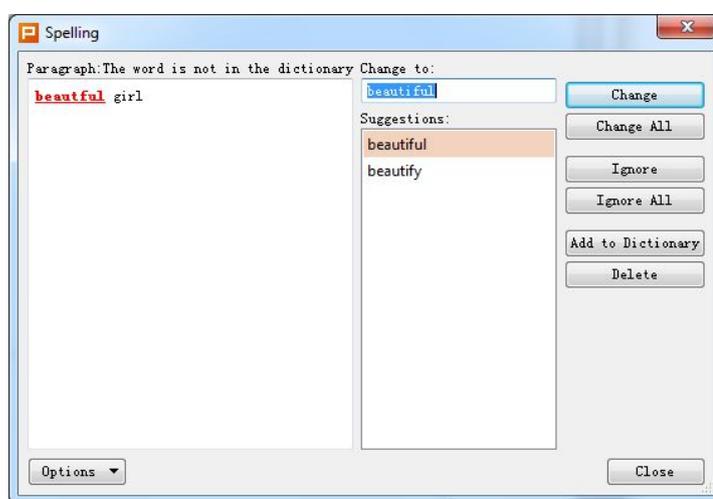

Figure 7.1-1 The Spelling dialogue box

Tips: You can set the dictionary by clicking the drop-down arrow of **Checking Spelling** and select **Set Language**, see below:

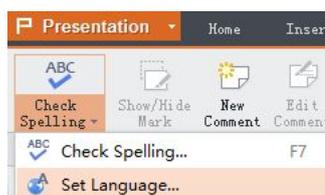

Figure 7.1-2 Set language

Then you can choose the UK English or the US English as the default dictionary:

Figure 7.1-3 Set default language

7.2 Comment

In Kingsoft Presentation, you can insert comments when illustrating something. After adding a comment, there will be a green square shown at the top right corner of the content you have selected. The content will appear automatically when you move mouse over the content.

7.2.1 Add New Comment

If you want to set up a reminder for the content, you can add comments. Select the content to which you want to add comment. In the **Review** tab, select **New Comment** . A green dialogue box will appear where you can type in your comment. See below:

Figure 7.2-1 Type in comment

7.2.2 Edit Comment

After adding a new comment, you can edit it by the following steps:

(1) Select the comment you want to edit.

(2) Click **Edit Comment**  in the **Review** tab. Then you can modify your comment.

Tips: You can also edit the comment by double-clicking the green square or right-click the dialogue box and select **Edit Comment**. See below:

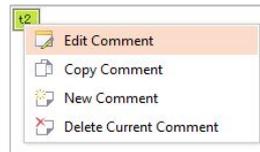

Figure 7.2-2 Edit Comment

7.2.3 Delete Comment

If you do not need the comment, you can delete it. Follow the steps below:

- (1) Select the comment you want to delete.
- (2) In the **Review** tab, click **Delete** and select **Delete** in the drop-down list. See below:

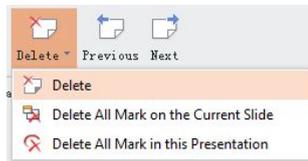

Figure 7.2-3 The Delete drop-down list

Tips:

- You can also select and right-click the comment and then select **Delete Current Comment** in the menu. See below:

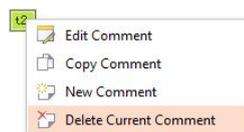

Figure 7.3-4 Delete Current Comment

- You can delete all mark on the current slide or in the presentation. In the **Review** tab, click **Delete**. In the drop-down list, select **Delete All Mark on the Current Slide** or **Delete All Mark in this Presentation**. See below:

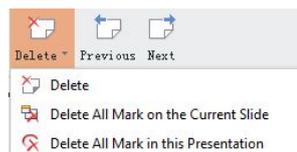

Figure 7.3-5 The Delete options

- You can hide or show your mark by clicking **Show/Hide Mark**  in the **Review** tab.

- If you want to alter from one mark to the next or the last mark, click **Previous**  or **Next**  in the **Review** tab.

8 View Tab

8.1 Types of View Mode

Kingsoft Presentation provides multiple types of view mode to make it easier for the user to view and edit the slides in the presentation. The types of view mode include the normal view, slide sorter view, slide show view, and slide master view. Each type of view mode has different features and is better suited towards the user under different circumstances.

8.2 Normal View

Normal view is the default view in Kingsoft Presentation. There are three panes in this view. The **Outline** and **Slides** tabs are on the left, where you can switch outlines and slides through the thumbnails.

The normal view combines the slide, outline and notes ribbons into one view. The **Outline** is used to view the outline. The **Slides** are used to preview the effects and to edit a single slide. The **Notes** pane is used to add and edit notes.

To switch to the normal view, click **Normal**  in the **View** tab.

8.3 Slide Sorter View

To organize, review, rearrange, and set timing and transitions for your slides, you can use the slide sorter view. It is an exclusive view where slides are shown as thumbnails.

Steps to switching to the slide sorter view are as follows:

(1) Click **Slide Sorter**  in the **View** tab. Or click the **Slide Sorter View** button  at the bottom of the window.

(2) The slide sorter view will show as below:

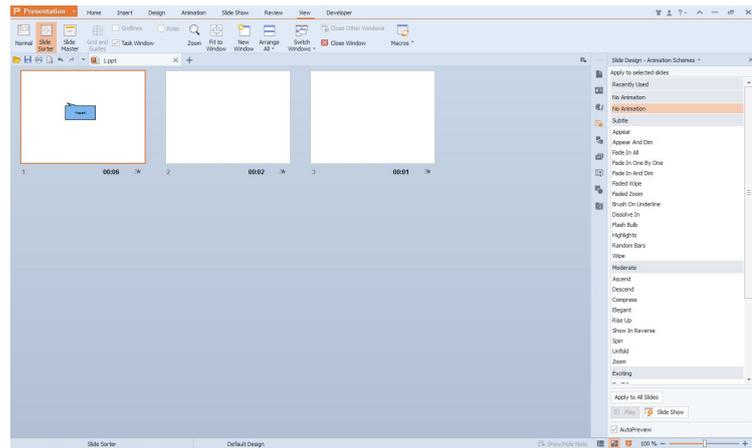

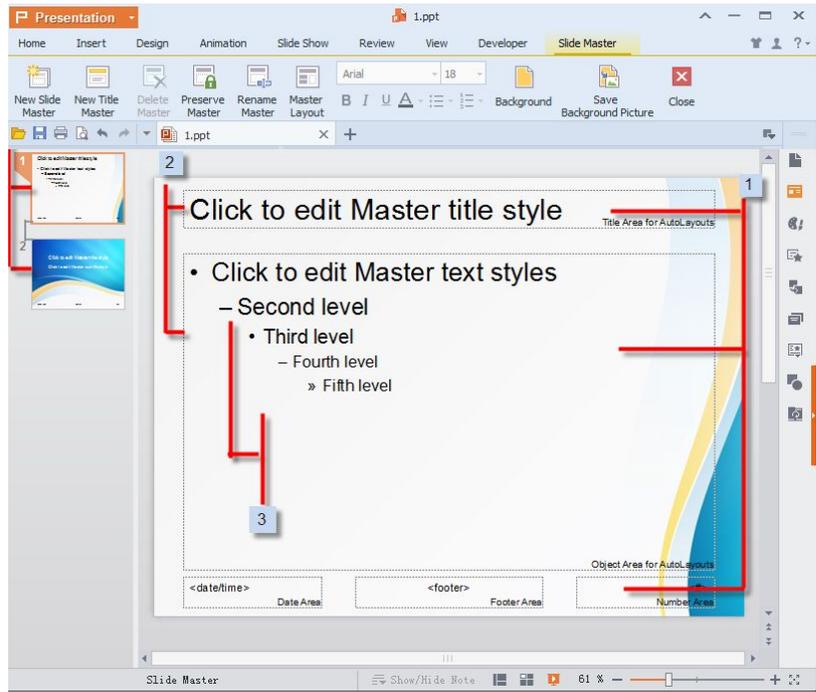

Figure 8.3-1 Slide Sorter View

8.4 Slide Master View

The slide master view stores the information about design templates. This information includes font style, sizes and positions of placeholders, background design, and color schemes. Every slide includes at least one slide master. The main advantage of using the slide master view is able to view all the modifications made to each and every slide. Therefore, when new slides are added, the same information can be taken from existing slides and placed on the new slides instead of inputting the information all over again. The slide master view is well suited for large presentations that require every slide to be uniform. To use the

slide master view, click **Slide Master**  in the **View** tab. The slide master view is shown below:

- 1 The font of title ,body and footer .
- 2 The placeholder position of text and objects.
- 3 Bullet style and background.
- 4 Slide and title master.

Figure 8.4-1 Slide Master View

8.4.1 Slide Master Tab

In the **View** tab, click the **Slide Master** icon to open the **Slide Master** tab where you can edit the slide master.

8.4.1.1 Add Slide Master

In the **Slide Master** tab, click **New Slide Master** to add a new slide master.

8.4.1.2 Insert New Title Master

Title master is an element of the design template, which stores information about title styles of slides. This information includes sizes or positions of placeholders, backdrop design, and color schemes.

To create a new presentation in the design template by default, click **New Slide Master** in the **Slide Master** tab to insert a new slide master. If you cannot find the **New Slide Master** icon, then click **New**

Title Master  in the **Slide Master** tab to insert a master.

If the **New Title Master** button is gray, that means your presentation already has a slide master. Generally speaking, when applying design templates, a slide master will be inserted in the presentation. Besides, most of the design templates contain a title master.

A slide master and a title master compose the slide-title master pair. They can show together in the master view. However, one slide master cannot exist with more than one title master.

Tips: It is preferable to create a slide master before you edit the slides. If you have inserted a slide master, then all slides in the presentation will be applied the associated slide master and layout. Therefore, if you want to modify the slides, be sure to operate on the slide master.

If the slide master is created after editing the slides, some items on slides may not correspond with the slide master. You can use background and text formatting features in slides to cover some custom content on slide master, but the other content can be modified only in the Slide Master View.

8.4.1.3 Delete a Slide Master

To delete a slide master, follow the steps below:

(1) Select the slide master you want to delete.

(2) Click **Delete Master**  in the **Slide Master** tab.

Tips: If you delete the slide master, the corresponding title master will be deleted as well.

8.4.1.4 Preserve Master

Sometimes, if you delete all of the slides within a certain master, or apply a design template to them, the slide master will be deleted in Kingsoft Presentation. To preserve a master in these cases, please do the following:

(1) Select the slide master you want to preserve in the Slide Master View.

(2) Click **Preserve Master** in the **Slide Master** tab.

(3) If you don't want to preserve the slide master, just click **Preserve Master** again.

Tips: Though you have preserved the master, you can delete it manually.

In the slide-title master pair, if you preserve one master, the other will also be preserved.

When you insert, copy, paste, and drag the slide master, or insert design templates in the Master View, slide masters will be preserved by default.

8.4.1.5 Rename Master

To rename the master, click **Rename Master**  in the **Slide Master** tab. In the **Rename Master** dialogue box, enter the new name in the **Master Name** enter box and click **Rename**. See below:

Figure 8.4-2 The Rename Master dialogue box

8.4.1.6 Master Layout

In the **Slide Master** tab, click **Master Layout** . In the **Master Layout** dialogue box, you can adjust the layout of the master.

Figure 8.4-3 The Master Layout dialogue box

8.4.1.7 Close Master View

To close the master view, click **Close**  in the **Slide Master** tab.

8.5 Grid and Guides

The grid is used to regulate the location of an object. Guidelines are two lines that can move horizontally and vertically and you can align objects quickly and accurately by using the guidelines. The objects automatically align to the invisible guides by default.

In the **View** tab, click **Grid and Guides** . The **Grid and Guides** dialogue box will open where you can set the values according to your needs. See below:

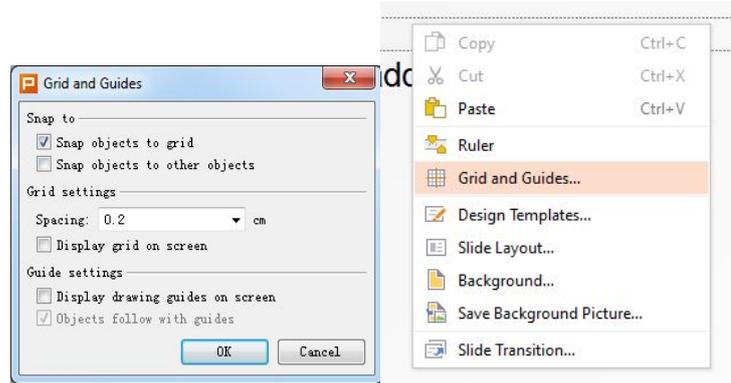

Figure 8.5-1 Set the grid and guides

There are another three ways to open the **Grid and Guides** dialogue box:

- In the **Home** tab, click **Arrange** and select **Align**. Then select **Grid and Guides** in the drop-down list.
- In the **Picture Tools**, **Drawing tools** and **WordArt** tab, click **Align** and select **Grid and Guides** in the drop-down list.
- Right-click the blank area in a slide and select **Grid and Guides** in the context menu.

8.6 Task Window

In the **View** tab, you can open or close the Task Window by selecting or deselecting the **Task Window** check box Task Window .

Kingsoft Presentation provides 9 kinds of task windows, including **New Presentation**, **Slide Layout**, **Slide Design-Color Schemes**, **Slide Design-Animation Schemes**, **Slide Transition**, **Slide Design-Design Templates**, **Custom Animation**, **AutoShapes**, and **Backup Management**.

8.7 Zoom

To use the zoom function, follow the steps below:

- (1) Click **Zoom** in the **View** tab and the **Zoom** dialogue box will open and show as below:

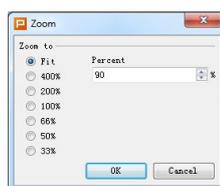

Figure 8.7-1 The Zoom dialogue box

- (2) Select the proper ratio option offered, or enter the proportion you need in the **Percent** enter box.
- (3) Click **OK** to complete the operation.

Tips: You can also click the **Fit to Window** icon  in the **View** tab to zoom the slides to fit the window.

8.8 Window Related Functions

In the **View** tab, you can use the window related function as you need, such as **New Window**, **Arrange All**, **Switch Windows**, **Close Other Windows**, and **Close Window**.

8.8.1 New Window

You can create a new window by the following methods:

- In the **View** tab, click **New Window**  to create a new presentation window.
- In the **Application** menu  **Presentation**, click **New** and the **Templates** dialogue box will open. Select the template you desire and click **OK** to create a new presentation.
- Keyboard shortcut combination <Ctrl+N>.
- In the **Quick Access toolbar**, click **New** .
- In the **Quick Access toolbar**, right-click and select **New Blank Presentation**.

8.8.2 Arrange All

In Kingsoft Presentation, you can arrange the windows, which is convenient for editing multiple presentations at one time. The steps are as follows:

- (1) In the **View** tab, click **Arrange All** .
- (2) Select an option in the drop-down list, such as **Horizontal**, **Vertical**, and **Cascade**.

Figure 8.8-1 Arrange windows

Based on your needs and presentation, you can adjust the size and position of the window manually.

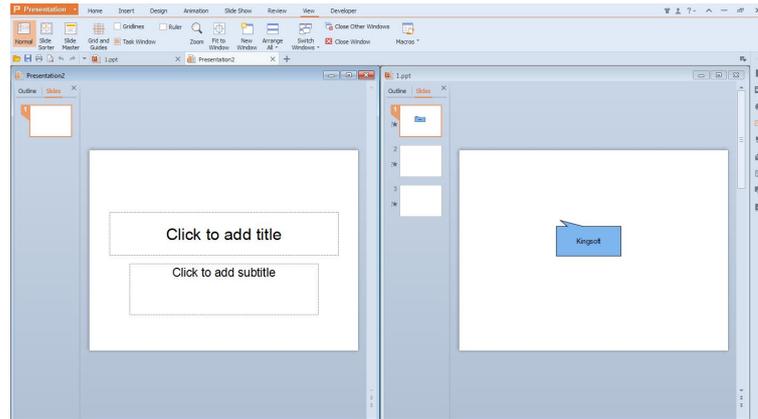

Figure 8.8-2 Adjust the size and position of the window manually

8.8.3 Switch Windows

You can quickly switch between multiple documents in Kingsoft Presentation 2013. In the **View** tab, click

Switch Window  to switch windows.

8.8.4 Close Other Windows

If you need to close multiple windows quickly, select the window you want to remain open. In the **View**

tab, click **Close Other Windows** .

8.8.5 Close Window

In the **View** tab, click **Close Window**  to exit the current window.

You can also select the document tab you need to close in the **Quick Access** toolbar and double-click or click the cross on the right side.

8.9 Print Preview Tab

To preview before printing, click **Print Preview**  in the **Quick Access** toolbar. The **Print Preview** tab will open where you can preview the presentation and adjust the print settings.

In addition, in the **Application** menu , click **Print Preview** and the **Print Preview** tab will also open.

8.9.1 Print Content

In the **Print Preview** tab, click the arrow on the **Slides**  icon. In the drop-down list, you can preview slides, outline and notes. You can also select the number of slide pages to be printed on one page. The names of the different contents that can be printed include: **Handouts (1 slide per page)**, **Handouts (2 slides per page)**, **Handouts (3 slides per page)**, **Handouts (4 slides per page)**, **Handouts (6 slides per page)**, **Handouts (9 slides per page)**, **Notes Pages (1 slide per page)**, **Notes Pages (3 slides per page)**, and **Outline View**.

8.9.2 Print Hidden Slides

In the **Print Preview** tab, click the **Print Hidden Slides** icon  to print hidden slides. To cancel the operation, click the icon again.

8.9.3 Framed Slides

In the **Print Preview** tab, click **Frame Slides**  to choose whether or not to print the frame slides. See below:

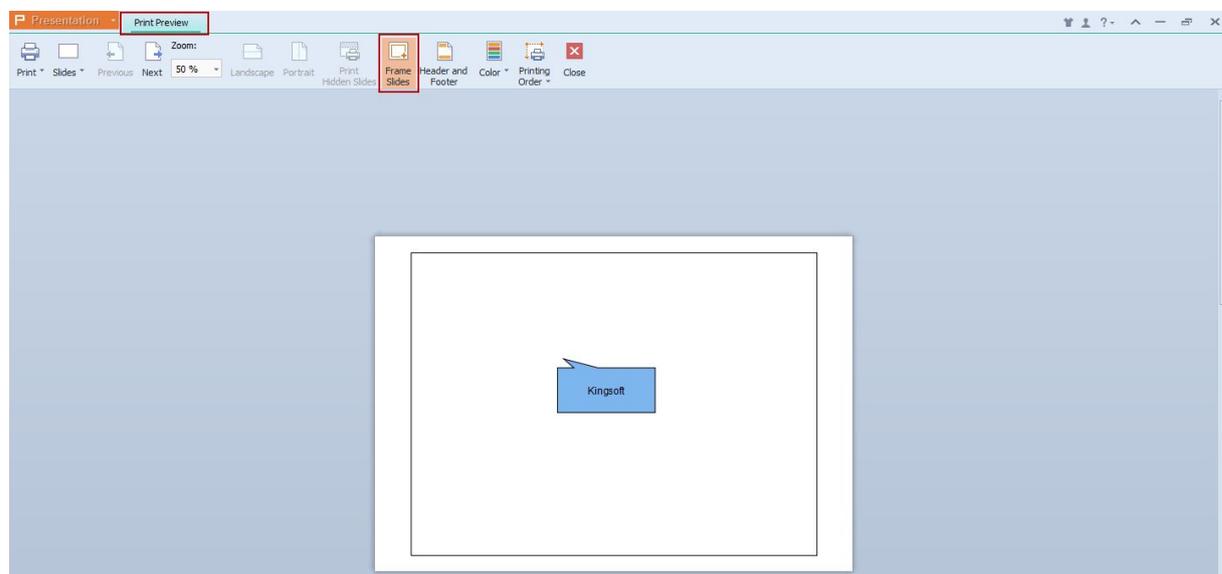

Figure 8.9-1 Framed slides to print

8.9.4 Close

To close the **Print Preview** view, click **Close**  in the **Print Preview** tab.

9 Developer Tab

9.1 Macros

To set macros in Kingsoft Presentation, follow the steps below:

(1) Click the **Macros** icon in the **Developer** tab, or choose the **Macros** option in the **Macros** drop-down list of the **View** tab. The **Macros** dialogue box will open and show as below:

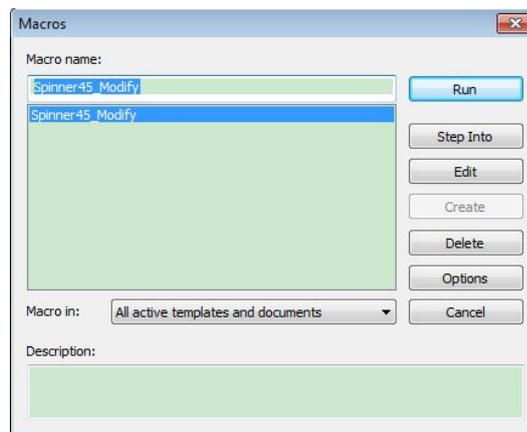

Figure 9.1-1 The Macros dialogue box

- (2) Enter the macro name in the **Macro name** enter box.
- (3) Select the range you want to apply the macro in the **Macro in** drop-down list.
- (4) Add description for this macro in the **Description** enter box.

The functions of the buttons at the right side are shown as follows:

- **Run**: Click to run the current macro.
- **Edit**: Click to edit the macro in Microsoft Visual Basic.
- **Delete**: Click to delete the macro.
- **Options**: Click to add shortcut key for the macro.
- **Cancel**: Click to exit.

9.2 Security

In Kingsoft Presentation, you can set security level for the macros. To do this, follow the steps below:

(1) Click the **Security** icon in the **Developer** tab. The **Security** dialogue box will open and show as below:

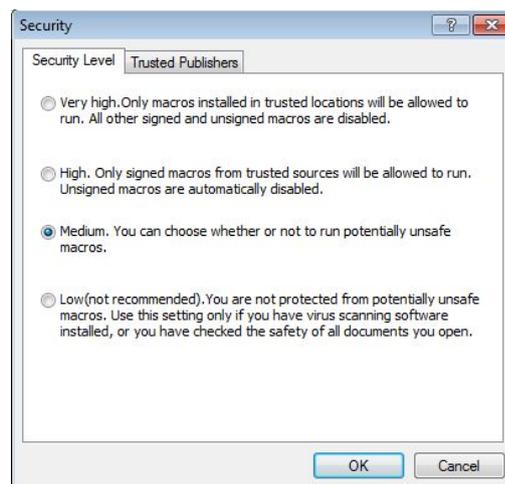

Figure 9.2-1 The Security Level tab

- (2) In the **Security Level** tab, choose **Very High**, **High**, **Medium**, and **Low** according to your needs.
- (3) Click **OK** to complete the operation.

9.3 Other Functions

- **Visual Basic Editor:** Click to open the Visual Basic Editor and edit the macros there.
- **Add-Ins:** Manage the Add-Ins available in this file.
- **COM Add-Ins:** Manage the COM Add-Ins available in this file.
- **Control Properties:** View and modify properties for the selected control.
- **View Code:** View and modify the code for the selected control in the Visual Basic Editor.

To add objects in slides, you can click the corresponding icon in the **Developer** tab. See below:

Figure 9.3-1 Add objects icons

You can add check box, text box, command button, option button, list box, combo box, toggle button, spin button, scroll bar, label, image, and control in slides by the corresponding icon.

When the cursor turns into a cross, hold and drag it to insert the object in slides. After the object was drawn, double click it to edit it in Microsoft Visual Basic.
